Column Rating Definitions

Risks

Aquatic Ratings

AQ H = Adjacent to sensitive population or potential fish barrier Species include Colorado river cutthroat trout, boreal toads wood frog, leopard frog, & Rocky Mountain capshell snail.

AQ M = When TES species are in the vicinity but probably not directly impacted by the road.

AQ L = Roads with minimal or no apparent effects on TES.

Watershed Ratings

High Risks = A substantial partion of the road segment (50% or greater) runs immediately adjacent to ther stream so it is hydrologically connected, there are known problem areas, or a high percent of the road is on sensitive soils, or a combination of these factors.

Med. Risk = 20-50% of the road segment runs immediately adjacent to the stream system or a high percent of the road segment is on sensitive soils, or there isknowledge of a potential or isolated problem area.

Low Risk = Less than 20% of the road segment is immediately adjacent to the stream system, little/no part of the raod segment is on sensitive soils, and there are no known problems.

Riparian/Aquatic Risk

Combined with riparian wildlife and aquatic species risk.

Recreation Ratings

Rec H = direct access roads or ways that access other recreation amenities (I.e., disperces campsites, trailheads, developed campgrounds). These roads also access well-used streams and lakes.

Rec M = Thru-roads with limited amenities that provide primary access to areas with limited recreation amenities.

Rec L = Secondary or tertiary access to the Forest.

Road Cost Ratings

Annual Mtce Cost: H > $10,000/mile
M > $5,000 to $10,000/mile
L < $5,000/mile

Deferred Mtce Cost: H > $50,000/mile
M > $25,000 to $50,000/mile
L < $25,000/mile

Costs included for USFS jurisdiction roads only, mtce level 3+. When no costs available, assume medium.

Wildlife Ratings

Marten — Roads separating large areas (multiple home ranges) of habitat or fragmenting medium-size areas (one home range) of habitat were HIGH.

Red-backed vole — Roads separating large areas (multiple home ranges) of habitat were HIGH.

Goshawk — Roads adjacent to known nests were HIGH

Lynx — Roads separating large areas (multiple home ranges) of habitat or fragmenting medium-size areas (one home range) of habitat were HIGH.

Snow compaction — Roads lead to known snow compaction areas that overlay riparian/wetland sites.

Overall Wildlife Ratings — **H** for any of the following: Snow compaction high, goshawk high, or 3+ wildife high.
M for those that don't fit in the H or L categories. If goshawk or riparian were M, then overall wildlife rating was at least M.
L for all wildlife lows or for all lows and one medium, except goshawk or riparian wildlife.

Values

Timber/Insect & Disease Value Ratings

High Value: where Timber Access Value and Insect & Disease Mgt Value = 5 or 6
Moderate Value: where Timber Access Value and Insect & Disease Mgt Value = 3 or 4
Low value: where Timber Access Value and Insect & Disease Mgt Value = 1 or 2

Fire Fuels Ratings

High Value: where Fire Suppression Value + Fuels Mgt Value = 5 or 6
Moderate Value: where Fire Suppression Value + Fuels Mgt Value = 3 or 4
Low Value: where where Fire Suppression Value + Fuels Mgt Value = 1 or 2

lower case ratings denote the road could serve its function at a lower maintenance level (e.g., maintenance level 2).

RMO x = has a current RMO
need = no RMO on file
update = RMO needs revision

Jurisdiction Questions: Road may not be under the correct jurisdiction or the status is not updated in the Lands right-of-way atlas or in the Roads INFRA database.

Lands Concerns: Road has some outstanding rights for private access or special use permit that would need to be considered before decommissioning or closure.
