3. **Utilization Standards and Monitoring:**

Allowable use is the percentage of use that will be allowed on key grass and browse species. This use will be measured in the key monitoring areas for the **Frisco Plaza** Allotment. The scheduled rotation, grazing season, and livestock numbers are indicated in Section 1 of these Annual Operating Plan/Instructions. **Adherence to utilization levels is mandatory and should be the limiting factor in adjusting grazing management.** Adjustments in numbers, rotation schedule, or season of use will be made if allowable use standards are met. Cattle will be moved to the next scheduled pasture or off the allotment when these forage utilization standards are met. The option to return livestock to a pasture that has received adequate plant re-growth will be considered if all resource objectives can be met.

The maximum allowable use levels set for the **Frisco Plaza** Allotment will be **35%**; in addition stubble heights should not be less than an average 2.5 inches on blue and hairy grama. Stubble heights not be less than 5 inches on sideoats grama, and no less than 6 inches on mountain muhly. Use of browse is not to exceed the **50%** level. Use levels will be monitored in key areas. The location of these is currently being verified. You are welcome to join us as we establish the permanent monitoring transects for gathering the stubble height

data. Attached is a copy of our tentative monitoring plan for the **Frisco Plaza** Allotment for the 2004 grazing season. If you have any questions please feel free to contact Ted McArthur or Jerry Turner at the office (505) 533-6232.

If utilization is found to exceed 35% and/or stubble height requirements at any time during the use period on any one key area, livestock must be removed from the key area, restricted area, pasture or allotment.

#### 4. **Range Improvements:**

**Fences:** Please let us know if any fences are beyond reasonable repair and are in need of reconstruction.

**Water:** Advance planning is needed for authorizing tank cleaning so surveys can be scheduled during the summer months. If the pipelines and troughs are beyond reasonable repair, we are willing to work with you to replace them. Please protect natural springs and areas with riparian type vegetation. Drainage bottoms, creeks, springs, and cienegas, where water is available, are most susceptible to livestock concentrations.

5. **The Annual Operating Plan/Instructions** are a part of the Term Grazing Permit as provided for in Part 3, Section 8. It complies with the standards and guidelines found in the Forest Plan. It also complies with the Endangered Species Act as found in the Biological Assessment and/or on-going grazing consultation for the **Frisco Plaza** Allotment. Any additional information collected during the year may be incorporated into the annual operating instructions.
