Superior National Forest Travel Management Rule – Subpart A

Roads Study -- Providing Comments

Superior National Forest managers are requesting public input on recommendations from a study of National Forest System (NFS) roads across the Forest. In the Roads Study, Superior National Forest managers have analyzed the risks and benefits for Forest visitors and the environment associated with the Forest's road system. The analysis, referred to as "Subpart A," is part of the implementation of the 2005 Travel Management Rule, 36 CFR 212.

The report, to be completed by October 2015, will identify a road system that considers access for management activities and the public, minimizes environmental impacts, and can be maintained within budgetary constraints. This part of the implementation of the Travel Management Rule is an ***information-gathering study, not a decision-making process.***

The Forest Service values public participation. Communications from the public, including commenters' names and contact information will be compiled as part of the public record for this project and will be provided to future environmental analysis (NEPA) teams for consideration in a future more in-depth analysis.

If you would like to share comments on the Roads Study recommendations or if you have ideas on how to best address maintaining roads with decreasing budgets, please provide your input by ***May 22, 2015***.

Hardcopy maps and public input forms are also available for review at each Ranger District office and the Forest Supervisor's office.
