District Ranger

As Permittee, my signature on these Annual Operating Instructions certifies that there is no change to my permitted livestock or base property ownership as described in my grazing permit.

Upon signature by the District Ranger, these Annual Operating Instructions are hereby made a part of your Term Grazing Permit numbers, 30007, 01779B, 30004A, 01784A, and 1800A approved by the Medicine Wheel/Paintrock District Ranger on 06/30/08; 06/27/05; 05/14/10; 06/14/05; 06/29/05.

Any changes or deviation from the direction outlined in the Annual Operating Instructions will need to be requested in a written notice to the Medicine Wheel/Paintrock Ranger Districts. This includes changes in animal numbers, class of livestock, period of use (changes in entry or exit dates from unit to unit), or changes in pasture rotation. No changes in these instructions will be recognized without written confirmation from the Medicine Wheel/Paintrock Ranger District.

2014 Annual Operating Instructions for Medicine Mountain C&H

Before Entering the Allotment
Please review all clauses of your term grazing permit and the information contained within this Annual Operating Instruction (AOI). Be sure to ask questions if any portions of your grazing permit or these operating instructions are not clearly understood.

Current years grazing fees must be paid prior to livestock entering the National Forest.

The following describes the **Permitted Use** for **Medicine Mountain C&H**, as described in your permit signed on 06/30/08; 06/27/05; 05/14/10; 06/14/05; 06/29/05:

Medicine Mountain C&H Permitted

Permittee	Number and Class	Season of Use	Head Months
Larry & Spencer Ellis	113 C/C 1 Horse	06/26-10/10	398 5
Spencer & Annette Ellis	248 C/C 1 Horse	06/26-10/10	872 5
Gifford Ranch, LLC	260 C/C 1 Horse	06/26-10/10	915 5
C.R. Schatz, Sr. & Lois M. Schatz IRREV TR	45 C/C 1 Horse	06/26-10/10	158 5
Tippetts Farm, LLC	421 C/C 1 Horse	06/26-10/10	1481 5

Entering the Allotment
The following information describes your Annual Operating Instructions for Medicine Mountain C&H as discussed.

The actual date livestock may enter the allotment will depend on range readiness. Unless notified by a Forest Officer that a delay will be necessary to allow for further forage development, you may plan to place livestock on the allotment on the entry date shown on your Bill for Collection.

Medicine Mountain C&H Authorized Use

Permittee	Number and Class	Pasture Rotation	Season of Use
Larry & Spencer Ellis	(76) C/C (33) Yearling 1 Horse	1st South Medicine	06/26-10/10
Spencer & Annette Ellis	(157) C/C (65) Yearling 1 Horse	2nd Upper Porcupine	
Gifford Ranch, LLC	(220) C/C 1 Horse	3rd Lower Porcupine	
C.R. Schatz, Sr. & Lois M. Schatz IRREV TR	(45) C/C 1 Horse	4th Five Springs	
Tippetts Farm, LLC	(284) C/C	Resting Railroad Springs	

	(110) Yearling 1 Horse	Resting Elk Springs	

Authorized numbers are less than 90% of permitted for Ellis, Tippetts, and Gifford; which is an annual Administrative adjustment. Ellis and Tippetts are placing the remaining balance of numbers on the Mexican Hill allotment in conjunction with the adjacent BLM allotment and is a shared pasture rotation management system. Gifford is authorized fewer numbers and will be placing them on the Red Canyon allotment per a grant process decision and will have an associated permit modification in 2015.

Compliance:
Upon signature, this AOI is made part of your grazing permit consistent with Part 1, item 3 and Part 2, Item 8(a). Please remember, your bill must be paid prior to entering the allotment. Other situations may develop during the grazing season which requires changes to these instructions. If this becomes necessary or if you cannot comply with some part of these instructions, the District Ranger must approve any changes in the planned area prior to implementing those changes.

Billing:
This AOI describes livestock movement and your paid grazing bill authorizes livestock to be turned out on National Forest System Lands.

Due Date: Payment of your grazing bill is due five days prior to your earliest turnout date to allow time for processing. The Forest Service is required to provide Permittee's 30 days to pay grazing fees.

Unauthorized Use: Livestock grazing on the National Forest System lands without the grazing fees being paid and processed are considered to be unauthorized and are cause for action to be taken against the grazing permit. Livestock remaining on the National Forest System lands after the end of the authorized grazing season must be billed at the unauthorized use rate and administration costs, and may be cause for action to be taken against the grazing permit.

Livestock Management

Type of Rotation: Deferred Rotation

Standards and Guidelines:
The allowable use/herbage left guidelines are designed to ensure that short-term effects of livestock grazing activities are within established parameters intended to provide for long term health and sustainability of rangeland resources. The two general approaches used to measure actual use to determine if the guidelines were met are residual herbage left and utilization.

Residual herbage left methods are expressed as the amount of herbage **left** after livestock grazing has occurred, and includes methods such as, stubble height and visual obstruction methods (Modified Robel Pole).

Utilization methods are expressed as the amount of forage **removed** by grazing or trampling, and include methods such as, paired plots and ocular estimates.

Please review the following allowable use/herbage left guidelines that will apply to all areas of you allotment(s). Total use by livestock and wildlife combined must not exceed any of these guidelines at the time livestock leave a pasture. You are responsible for determining when allowable use has been reached and for moving your livestock to the next unit in your rotation or off the allotment when allowable use has been reached.

Upland Range Sites

Idaho Fescue vegetation types on sedimentary soil sites on the forest below 9,200 feet elevation (Excludes sites dominated by timothy and smooth brome)	Visual Obstruction Reading (VOR) of 5 or more bands for all applicable sites in each pasture. Readings of 4 or more acceptable.
Idaho Fescue vegetation types on granitic soil sites on the forest below 9,200 feet elevation.	Visual Obstruction Reading (VOR) of 5 or more bands for all applicable sites in each pasture.
All Other Sites (sites dominated by sagebrush, timothy and smooth brome or above 9,200 feet elevation)	A. Maximum of 40% by weight in pastures used prior to August 1st. B. Maximum of 50% by weight in pastures used after August 1st.

Riparian Range Sites

Herbaceous vegetation on all sites.	A. Average 5 inch stubble height on wide leaf *Carex* species remaining if livestock leave a pasture prior to August 1st *. B. Average 7 inch stubble height on wide leaf *Carex* species remaining if livestock leave a pasture after August 1st *.
Willows	Maximum of 35% use of current years leaders by livestock

*All stubble height guidelines stated above are the minimum required when transect measurements record the longest leaf length of all leaves readily available for livestock grazing for each plant measured. Leaves or portions trampled in the mud, lying on the ground or in water, protected by willows, or otherwise unavailable to be grazed are not included in the measurements.

Aspen Range Sites

Herbaceous vegetation within all aspen and cottonwood stands.	5 inch stubble height for all grasses and sedges when livestock leave a pasture*.

* All stubble height guidelines stated above are the minimum required when transect measurements record the longest leaf length of all leaves readily available for livestock grazing for each plant measured. Leaves or portions trampled in the mud, lying on the ground or in water, protected by willows, or otherwise unavailable to be grazed are not included in the measurements.

Livestock should be moved to the next pasture or off the National Forest, if in the last pasture, when further use will exceed the stated allowable use. It is your responsibility to manage your livestock within each pasture to assure these guidelines are not exceeded. This will require frequent monitoring of the vegetation by you and/or your rider, and not making pasture moves based on calendar dates.
It is important to note that allowable use guidelines outlined in this AOI, apply to all suitable range sites within the allotment(s). To assist you with your responsibilities of monitoring the actual use, all monitoring measurements will be done using a key area concept. Key areas are generally those areas livestock have the tendency to graze first when placed in a pasture. In most cases, the key areas will include both riparian and upland range sites, so it is important to keep close watch on the all range sites with the key area and plan livestock moves when use is nearing the guideline on either the upland or riparian sites.

Key Areas

Key areas serve as a monitoring and evaluation point for the degree of grazing use. Properly selected key areas give an indication of the overall acceptability of current grazing management to meet all resource objectives. The following is a list of key areas for each allotment; these areas may be moved or redefined in future years if monitoring results indicate a change is necessary.

- **Five Springs Pasture**:
  1. 300 yards on both sides of Five Springs Creek
  2. 300 yards on both sides of both drainages running southerly into Five Springs Creek in Section 20

- **Lower Porcupine Pasture**;
  1. 300 yards on both sides of Long Park Creek, including the park adjacent to the creek in NW ¼ SE ¼ Section 10
  2. Drainage flowing northerly into Porcupine Creek including the park in SW ¼ SE ¼ Section 10
  3. Drainage flowing southerly into Porcupine Creek from Devil's Canyon Road including the associated park in NW ¼ NW ¼ Section 11
- **Upper Porcupine Pasture**:
  1. Porcupine Basin and the associated drainages in Section 7
  2. Willow Basin in SE ¼ SE ¼ Section 35, SW ¼ SW ¼ Section 36, Township 57 N, Range 91 W; NW ¼ NW ¼ Section 3, and the NE ¼ NE ¼ Section 4 of Township 56 N, Range 91 W, which includes a ½ mile upstream; 300 yards on both sides of the main drainages in Section 3, 4, Township 56 N, Range 91 W ; Section 35, Township 57 N, Range 91
- **South Medicine Pasture**:
  1. Headwaters of Crystal Creek and the associated basin from Highway 14A upstream to the old highway (Section 23 & 26),
  2. Riparian area north of Highway 14A in the SE ¼ SE ¼ Section 28 and running northeasterly in the SW ¼ SW ¼ Section 27, including the drainage in the SW ¼ Section 27
- **Railroad Springs Pasture:**
  1. 300 yards on either side of creek bottom along entire length of the Railroad Creek drainage in Sections 5 & 8
- **Elk Springs Pasture:**
  1. The basin created by large slump area near the head of Tillet's Hole Creek, and open areas along creek for a distance extending 1.0 miles downstream (north) from basin
  2. The creek bottom and open park area adjacent to Elk Springs Creek from Elk Springs downstream (SW) for approximately 1.5 miles

If you need assistance determining use levels or identifying the key areas, please do not hesitate to contact Shawn Heinert or Nick Padilla.

Monitoring
Permittee collection and submission of *Carex spp.* stubble height data is voluntary, but requested by this office. The Permittee monitoring program was designed to give the Permittee a trigger point to help determine when livestock should be removed from a pasture. You are still responsible to manage your livestock to assure that allowable use guidelines are met in all areas of the allotment. It is strongly encouraged that you continue to complete stubble height monitoring in all key areas with riparian plant communities, to assure actual use does not go beyond the guidelines stated within this AOI. Any forms voluntarily submitted to our office will be placed in the allotment monitoring folder.

When conducting stubble height monitoring, it is recommend that you read enough transects to obtain a representative sample of the residual leaf length of the dominant sedges. The number of transects you will need will depend on the size of the area and the variances of use levels. One transect may be sufficient in a narrow riparian area where use does not vary. Two or more may be necessary in a larger riparian area if you detect utilization varies significantly within 3 feet of the water's edge, compared to the remainder of the area. Photos of transects, along with its general location, are not required, but would be helpful to substantiate your documentation. The Forest Service will also be conducting spot checks and transect measurements of key areas throughout the grazing season to verify guidelines are being met.

Range Improvements
Range improvements listed in part three of your permit must be maintained before livestock enter the allotment(s). The maintenance standards listed in Part 2, Clause 8 (i) of your term grazing permit states "the Permittee will maintain all range improvements , whether private or Government owned, that are assigned for maintenance to standards of repair, orderliness, and safety acceptable to the Forest Service." The maintenance of each improvement must be completed prior to the time livestock enter the pasture in which the improvement is located each year, or in the case of allotment boundary fences, prior to livestock entering the pasture on either side of the fence. The minimum maintenance required will be as follows:

1. **Springs:** All tanks are to be level, completely surrounded by dry ground and easily accessible by livestock. The inlet and overflow pipes are to be free of crimps or breaks, completely buried or otherwise protected from livestock and capable of delivering water to and away from tanks without any water spilling in the immediate vicinity (20-30 ft.) of the tank. Livestock barriers over tanks must be sturdy and all poles and planks must be in good condition and nailed/bolted in place.

2. **Wire Fences:** Fences are to be in an upright, vertical position with all broken wires repaired, wires tight and properly spaced and all corner posts, braces, line posts, steel posts, stays, loops, staples, etc. replaced as needed. Gates are to be tight enough to prevent sagging but must be able to be easily opened and closed by the general public.

3. **Buck and Pole Fences:** Fences must be in an upright, serviceable position. Bucks that are spreading and lowering the overall height of the fence must be stabilized with a bottom brace or replaced. All poles must be nailed to bucks and all broken or rotting poles and bucks are to be replaced.

Planned range improvements

- If funding is available, Forest Service will provide electric fence materials for about 1 mile of fence for South Medicine Drift Fence #04-08. This will include an additional charger, posts and 1 strand of wire for about ¼ mile. Gate rig, some posts, and wire are already on location. Planning, gaining clearance, and coordinating may take place in 2014, time permitted.
- The Cow Camp Pond dike needs repair. FS to look at in 2014 and develop a plan.
- The Pete's Hole Spring exclosure needs replacement. Permittees may get to it this year.
- Little Tepee Spring Development # 304-19's original source has dried up. A proposed alternate spring source was reviewed in 2010. FS will complete archaeological clearance in 2014 if time allows, with reconstruction ASAP.
- Look at relocating a portion of Cone Mt Fence #301-34 near Little Tepee Ridge. Will need to review on ground with all affected permittees.
- Top of Five Springs, out year project would be to look at permanent fence in place of temporary on top end. ½ mile 2 strand electric. Not likely this year due to timing of use in pasture, should look at potentially in 2015.
- Pistol Ridge Spring Exclosure Rehab. Will work on this year. Plan to reduce size and use existing material.
- Look into additional fencing on the east end of Lower Porcupine near Willow Basin. Fence #08-02 is not stopping cattle, we will assess this year.
- FS will look at bog near Radar Garage, and determine course of action.

Permittee Instructions

1. Compliance with the Bighorn National Forest off-road travel restrictions are required at all times. An off-road permit may be issued (at the District Rangers discretion) upon request for the sole purpose of moving and tending your livestock camp. The permit will be issued with the stipulation that soil conditions must be dry and no resource damage will occur.
2. Salt should be placed on rocky ground or salting troughs to avoid damage to vegetation and soils. To minimize attraction to wildlife species, salt only sufficient amounts so that surplus is not left behind after livestock leave the area.
3. Salt should be placed between water developments and at least ¼ mile from water, roads, and trails. Location of salt should change every year and preferably, every time salt is place within a pasture. Salt should be placed in areas of rock outcrops, mature timber (other than aspen), or areas of dense sagebrush where the general public will not easily see it. Do not salt in aspen stands.
4. Permittee or Permittee employees shall not use or place poison, including cyanide guns, for predator control on National Forest lands.
5. Dead livestock carcasses must be moved at least 100 feet from the high water line of streams and lakes, springs, and out of the view of roads or trails, and away from any areas of significant public use.
6. Horses to be used on the allotment and kept in the horse pastures will be charged for at the same rate as for cattle. These horses will be broke and usable, for use in the management of the allotment. Application for horse use will be made each year prior to beginning of the grazing season.
7. Any equipment used in the transport of livestock, including horse trailers and stock trucks, should be washed before coming onto the allotment(s) if they have been used in areas where noxious weeds are present.

8. By USDA Order 04-00-097, all non-pelletized hay, straw, or mulch possessed, stored, or transported on National Forest System Lands, in individual bales or containers, must be tagged or marked as noxious weed free, or must have the original and current evidence of noxious weed free certification documentation present. All markings must meet the State and/or county standards for certification as noxious weed free.
9. Your assistance in locating noxious weed sites and reporting them to your Forest Officer is greatly appreciated. If you are able and willing to assist in treating noxious weeds, please work with your Forest Officer to determine how best to help.
10. If livestock are being fed hay prior to coming on to the Forest, please see to it that they are fed weed free hay at least 2 days prior to entering the Forest

Required Reporting
Enclosed is a Grazing Use Record for the upcoming season. Please use this form to record the dates livestock spend on the allotment as well as other information such as livestock loss, grazing use, resource concerns, etc. Range Improvement Maintenance form is also included. Please provide information on any project you maintain. Please return the forms following the 2013 grazing season by October 30, 2013.

Coordination & Cooperation
If you spot a wildfire, report it immediately to the Interagency Dispatch Center in Cody, WY at (307) 578-5740 or Toll Free (800) 295-9954.

Notice
The Permittee will provide the Medicine Wheel/Paintrock Ranger District with notification of any changes or deviation he or she wishes to make in these Annual Operating Instructions.

We look forward to working with you and solicit your cooperation and involvement in bringing about sound range and livestock management practices that will enhance all of the allotment resources. If you have any ideas or suggestions that will improve the management of the allotment, we would like to hear from you. Please keep us posted about activities and conditions on the allotment. If you have any questions or concerns regarding management, please do not hesitate to contact Shawn Heinert or Nick Padilla at (307) 548-6541.
