

Forest Service
U.S. DEPARTMENT OF AGRICULTURE

WILDFIRE DANGER!

Warm temperatures dry out fuels like leaves, twigs and grasses.

Low humidity levels and lack of rain will dry out the fuels.

Wind helps spread flames faster. Even a small fire can quickly spread.

Make sure your campfire is dead out!

CHECK

Check offices, bulletin boards, and websites for current fire restrictions.

DROWN

Drown the campfire ashes with lots of water.

STIR

Stir the remains, add more water and stir again.

FEEL

Feel with your hand. If it's too hot to touch, it's too hot to leave.

Campfire Alternatives...

Consider alternatives to campfires, such as pressurized gas stoves and lanterns.
