

Insufficient Information Available at This Time

Recommendations and Evaluations

Common Name: Mountain Checkered-skipper

Scientific Name: *Pyrgus xanthus*

Recommendation: Insufficient information available at this time

Recommendation Rationale:

While it is limited to southern Colorado within R2, there simply is a paucity of information in which to base a recommendation. No information is provided on population levels or trend; habitat trend; or threats. Yet it does occur in a number of habitat types, including forest openings, grasslands, and ditches. Host plants include cinquefoil and dandelions (!).
