

**Insufficient information available at this time**

**Recommendations and Evaluations**

**Common Name:** Spalding's Blue

**Scientific Name:** *Euphilotes spaldingi*

**Recommendation:** Insufficient information available at this time

**Recommendation Rationale:**

Global ranking G3 but taxonomy in this genus is very unstable. Somewhat limited range but the number of occurrences uncertain. Inhabits interface of pinyon-juniper and Gambel oak-ponderosa pine woodland in southwest Colorado within R2. No information on population status or trend. No known threats but habitat may be subject to invasion by weeds and increased fire risks as a result of fire exclusion. However, there was not sufficient information to make a determination.
