

SAN FRANCISCO PEAKS WEED MANAGEMENT AREA

"Protecting our natural resources through
the management of invasive weeds"

A cooperative movement of Flagstaff based land management
agencies started through a grant from the National Fish & Wildlife
Foundation Pulling Together Initiative

Northern Arizona Weed Council Guest Seminar: BIOLOGICAL CONTROL OF WEEDS - WILL IT WORK FOR NORTHERN ARIZONA?

Northern Arizona Weed Council and the San Francisco Peaks Weed Management Area will be hosting a guest presenter from APHIS on Wednesday, October 27th beginning at 11 am. The meeting site has been moved to the Conference Room of Building # 3 of the USGS complex in Flagstaff. Dr. Richard Hansen, Laboratory Director at the National Weed Management Lab out of Fort Collins, will be making a presentation on Biological Control Agents. This is your opportunity to get questions answered first hand by those working directly with biologicals, so attendance is recommended for those interested in this avenue of mitigation. In addition, Terry Arundel from the USGS will be providing information to help delineate/redefine Weed Management Area mapping boundaries. You may bring your own lunch or contribute to a pizza fund for cerebral sustenance. See you there.
