Dear Jim:

BT - used on streams ; wetlands

Boise Cascade Corporation recently completed an aerial spray application of Sevin-4-oil on approximately 30,000 acres of company timberland in NE Oregon, to suppress an epidemic population of Western Spruce Budworm. The project was designed and implemented by BCC, with a great deal of technical and practical assistance from Oregon Department of Forestry Staff. I would like to recognize the following individuals who contributed to a highly successful operation:

Dave Overhulser	Dave Mormon
Paul Joseph	Rick Wagner
Mark Jacques	Jordon Ryder

Thanks to the contribution and involvement of your staff, we successfully accomplished a safe, environmentally sound and effective control effort which reduced average pre-spray larval counts of 16 larvae/branch sample to less than .25 larvae/branch. The high success of this operation would not of been possible without the assistance and involvement of the Oregon Department of Forestry staff. Thank you for your assistance.

Sincerely,

Tom Goodall
Assistant to Region Timberlands Manager

Dear Julie,

Enclosed you will find a hardcopy map for our 1988 cooperative spray project and a floppy containing the spray blocks for our 1992 Aerial Spray Project re Kathy Sheehan for assessment of project effectiveness.

Please call if you have any questions.

Sincerely,

Lynn D. Wallenmeyer
