

Resolution – Working Group 1a, Rapid Assessment of Natural Disasters

Be it resolved that the FHM Program Manager appoint a working group of state, federal, and university partners to:

- Develop a matrix of methodologies (toolkits) to respond to catastrophic events impacting forest resources.
- These methodologies should provide results within an appropriate timeframe (both short- and long-term) and standardized manner to provide all *audiences* with the necessary information.

Results to be presented at the 2007 FHM Working Group Meeting.
