

Adaptive Management Group Discussions

Objectives

- Provide a list of prioritized items that can be used to adapt how the dry forest strategy is planned and implemented.
- Report results to decision makers and strategize on how to address.
- Additional follow-up in order to “put into action”.
- Adjust research/monitoring as needed.

Discussion Format

- Break into 5 groups
- Brainstorm for 20 minutes per question (60 minutes total)
- Each participant then identifies their top 3 priority items for each question (10 minutes)
- Each group report results (20 minutes)

Some Sideboards

- Actions that are within our control
 - Budget, regulatory requirements are not
- NOT a GRIPE session, be constructive, create a vision for how to move forward
- Resources are slim, may need to think “out of the box” on ways to get work done

Questions

- What is working in Dry Forest project planning and implementation that should continue?
- What could be improved in Dry Forest project planning and implementation?
- What information needs currently limit the ability to plan and implement Dry Forest projects and what opportunities do we have to gather this information?
