Stickney Postfire Regeneration Strategy

FEIS Workshop, IFSL

Peter F. Stickney, RWU-4201

April 12, 1989

SERAL ORIGIN of Species Comprising Secondary Plant Succession in Northern Rocky Mountain Forests

Seral origin, as defined by location relative to disturbance and time of establishment, describes the source of postdisturbance plant species constituting the vegetation of secondary plant succession (- forest succession). It provides a basis for categorizing postfire development modes.

SURVIVOR - - - - - Extant predisturbance (prefire) plants capable of regrowth after burning.
(Susceptibility to fire relates to growing-point location relative to fuel bed/mass.)

Perennial aerial stem	Phanerophytic, without adventitious buds.
Suprasurface stem	Chamaephytic, prostrate, mat-forming or stoloniferous stems growing <u>on</u> the organic mantle.
Surface rhizome	Hemicryptophytic, stout horizontal stem rooted on or embedded in the mineral ground surface.
Rootcrown	Phanerophytic, adventitious buds.
Caudex	Subsurface to near-ground surface stems.
Rhizome	Underground stems.
Geophyte	Deeper seated regenerative plant parts (usually stems: bulb, corm, etc. or root with adventitious buds).

Colonizer - - - - - New plants established from post-disturbance (postfire) germinated seed.

Initial Colonizer - - - - - A seedling establishing in the initial community.

RESIDUAL COLONIZER:
Ground-stored
Crown-stored
Derived from seed on site at the time of disturbance. (- Initial Onsite Colonizer)
Seed site in the ground.
Seed site in tree crown.

INITIAL OFFSITE COLONIZER: Derived from interaction of seed dispersal and germination substrate of the initial post-disturbance (postfire) community.

Secondary Colonizer - - - - - A seedling establishing in the post-initial community.

SECONDARY OFFSITE COLONIZER: Derived from interaction of seed dispersal and germination substrate and established plants of the post-initial community.

Secondary onsite colonizer Derived from seed of survivor or onsite colonizer.

R-1 Autecology Database (PLANTAU)

Field 11 - Stickney Survivor / Colonizer Modes:

Peter Stickney (1989), in meeting at the Intermountain Fire Science Laboratory, proposed modes by which plant species survive fire or colonize burned sites.

11a - Survivor Modes (postfire regrowth sources)

<u>Code</u>	<u>Mode</u>	<u>Fig. 1</u>
A	Tree without adventitious-bud rootcrown (e.g. Conifer)	a.
B	Shrub without adventitious-bud rootcrown	b.
C	Prostrate woody plant, stem growing <u>on</u> organic mantle	c.
D	Surface rhizome / chamaephytic rootcrown in organic mantle or on soil surface	d. e.
E	Tree with adventitious-bud rootcrown; soboliferous species root sucker	f.
F	Tall shrub, adventitious-bud rootcrown	g.
G	Small shrub, adventitious-bud rootcrown	h.
H	Rhizomatous low woody plant, rhizome in organic mantle	i.
I	Rhizomatous shrub, rhizome in soil	j.
J	Rhizomatous herb, rhizome in soil	k.
K	Tussock graminoid (e.g. bunchgrass)	l.
L	Caudex, growing points in soil	m.
M	Geophyte, growing points deep in soil	o. p.

11b - Colonizer Modes (postfire seed sources)

Fig. 2

- A Ground Residual Colonizer (onsite, initial community only)
- B Crown Residual Colonizer (onsite, initial community only)
- C Initial-offsite Colonizer (~~offsite~~, initial community only)
- D Secondary Colonizer (onsite or offsite seed sources)

11c - Successional Development Status

- A Obligate Initial Community Species (species present only/mostly present in the early seral communities)
- B Facultative Seral Species (species present in both early and late seral communities)
- C Obligate Climax Species (species present only in late seral / climax communities)

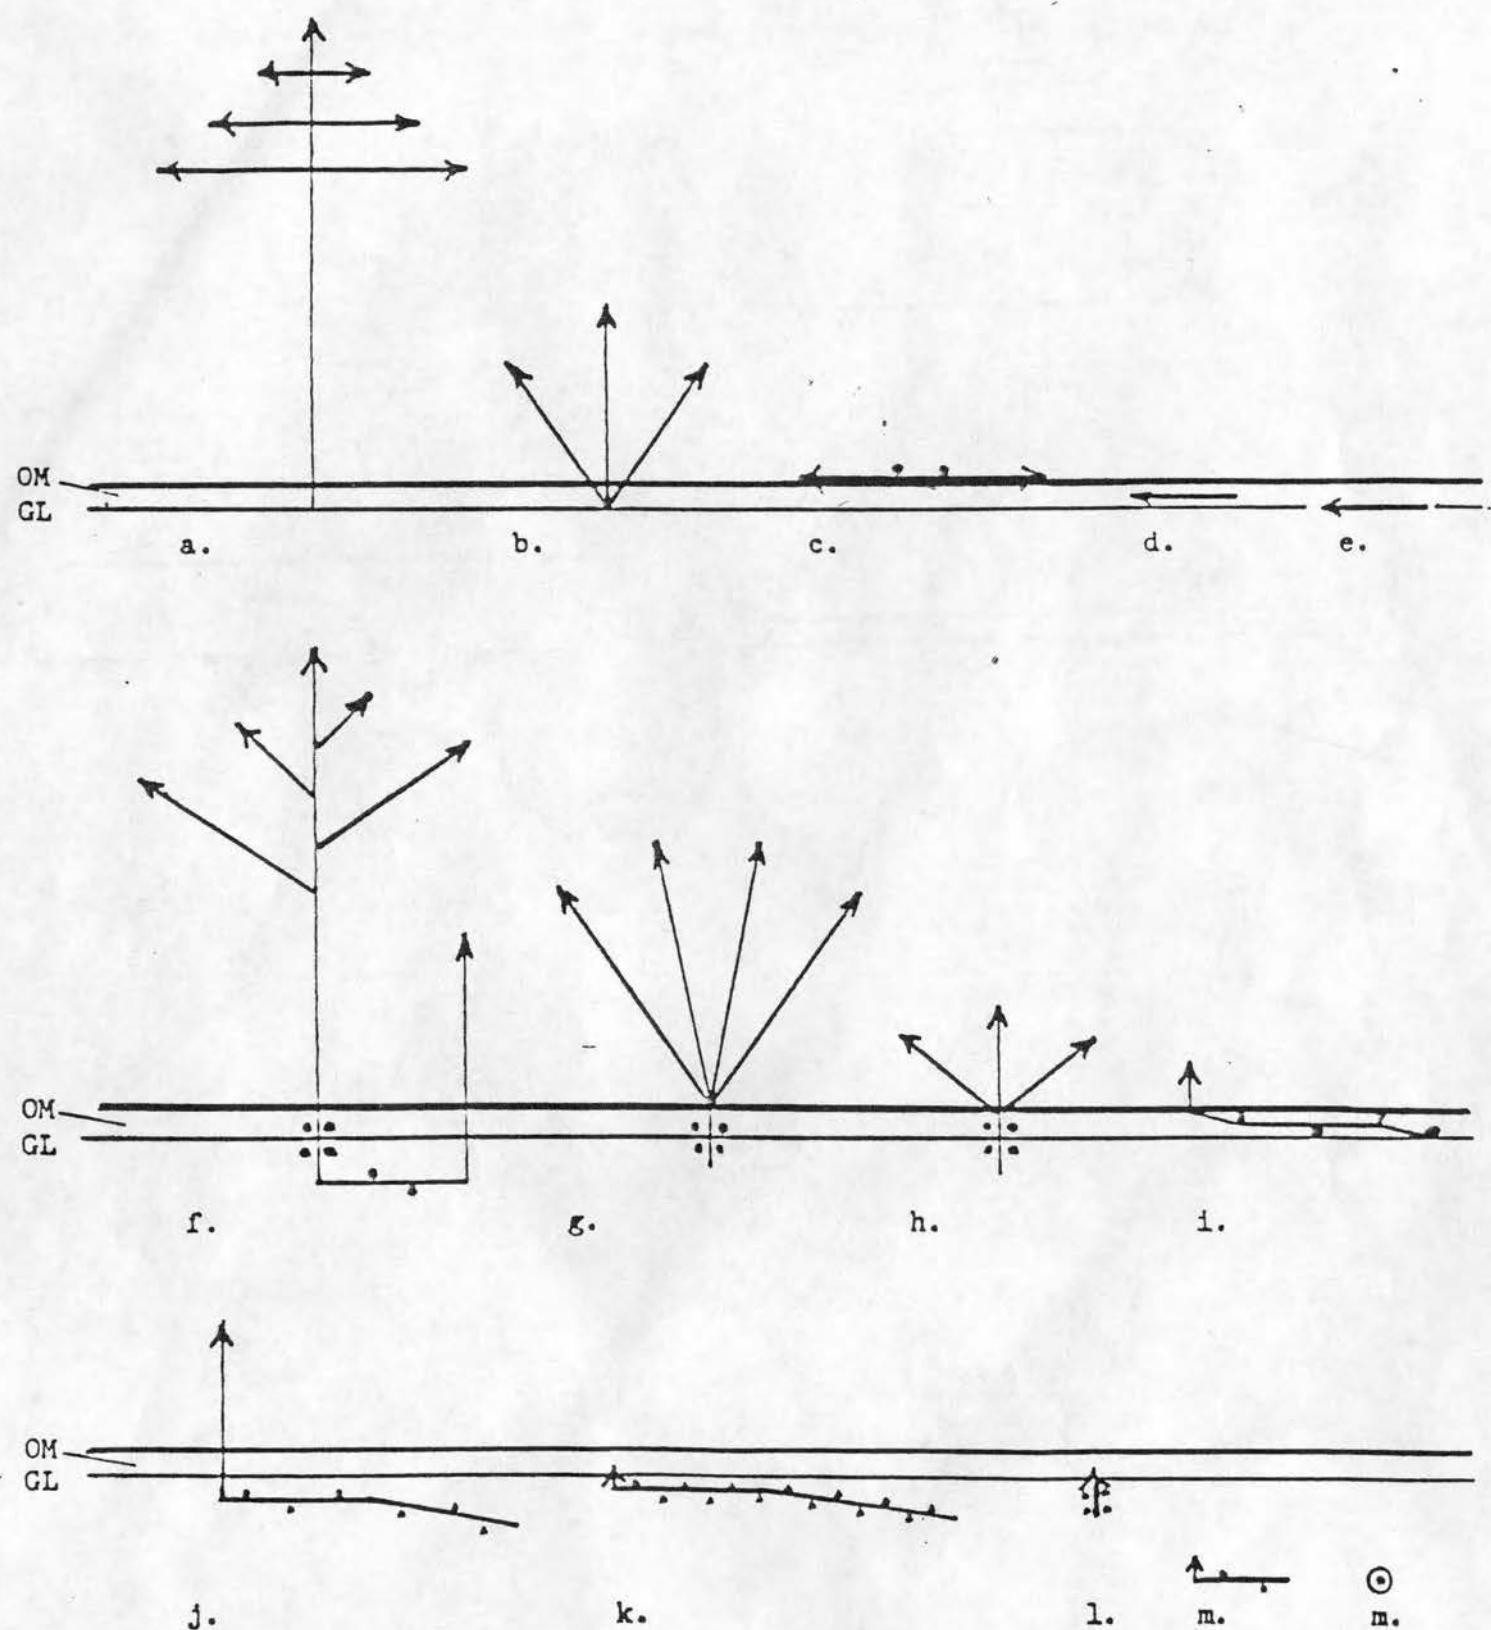

Figure 1. Seral origins for the survivor component of the initial community of forest succession in the Northern Rocky Mountains. Stylized life forms portray the perennial stem system and position of the active (arrowhead) and dormant (dots) growing points relative to the fuel bed of the forest floor (OM) and the mineral ground - organic mantle interface (GL). Life forms: a & b. perennial aerial stem without adventitious buds; c. suprasurface stem; d & e. surface rhizomes; f. g. & h. rootcrown; i. j. & k. rhizomes; l. caudex; and m & n.

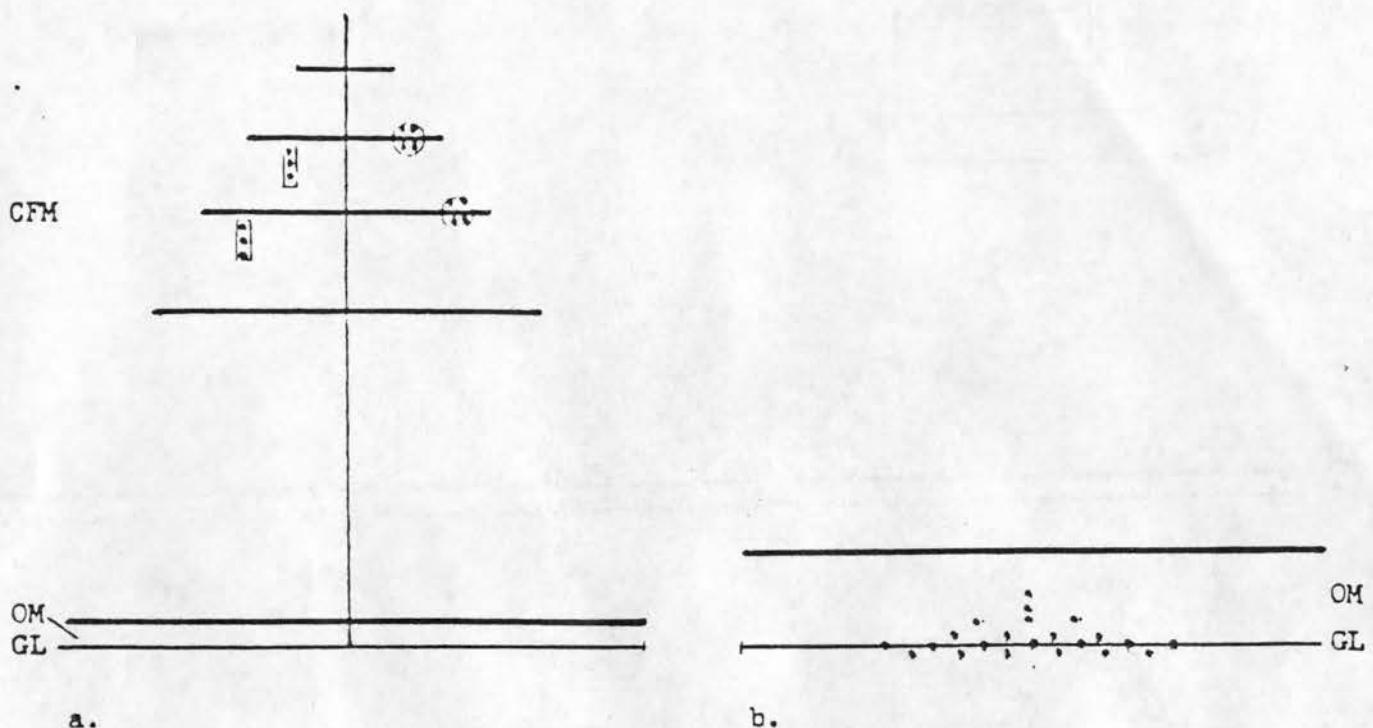

Figure 2. Seral origins for the residual colonizer component of the initial community of forest succession. Diagrammatic representation depicts locations of residual colonizer seed sources in the prefire forest relative to crown (CFM) and ground (OM) fuel masses and the mineral ground - organic mantle interface (CL). Residual colonizer seed sites: a. tree (& shrub?) crown and b. ground. Due to their restriction to the pretree stages of succession seeds of obligate initial seral species with long duration viability; e.g. Ceanothus velutinus, Dracoccephalum parviflorum, Geranium bicknellii; concentrate about

APPENDIX: SERAL CHARACTERISTICS OF THE FLORISTIC COMPOSITION OF THE FIRST DECADE'S SECONDARY
SUCCESSION ON SUNDANCE BURN STUDY AREAS.

(TOTAL: 139 species)

LEGEND:

Species:

Names in capital letters denote principal cover species: (15+ percent cover)

^aSeed or fruit capable of long-range wind dispersal

^bExotic species

^cBerry or berrylike fruit; bird and/or animal dispersed

^dArmed fruit; animal dispersed

Physiognomic life form:

T-Shrub = tall shrub (maximum height > 2 m)

LWP = low woody plant (maximum height < 0.5 m)

A-Herb = annual herb

B-Herb = biennial or short-lived perennial herb

Seral origin:

Introduced denotes planted or seeded by man

R-colonizer denotes residual colonizer (onsite source)

I O-S colonizer denotes initial offsite colonizer (immigration in succession year 1)

2d O-S colonizer denotes secondary offsite colonizer (immigration after succession year 1)

Double entry in the species listing indicates those 14 species that exhibited more than one seral origin

(A) - accidental; denotes very infrequently surviving species or introduced as a "weed" seed in seeding mixture

Fire survival adaptation:

CSS = Tree crown source seed (onsite); 1 short-term viability, 2 long-term viability

GSS = Ground source seed (onsite); 1 short-term viability, 2 long-term viability

First/last succession year (S.Y.) record: First and last year of recorded occurrence

Occurrence: Numerals denote the number of study areas on which the species occurred as presence, frequency, and cover, respectively.

APPENDIX I

Survival strategies of some Northern Rocky Mountain plant species

SURVIVING PLANT PARTS

Root Crown/Caudex:

Trees: *Betula papyrifera*, *Populus tremuloides*, *Populus trichocarpa*.

Shrubs: *Acer glabrum*, *Alnus sinuata*, *Amelanchier alnifolia*, *Ceanothus sanguineus*, *Ceanothus velutinus*, *Holodiscus discolor*, *Lonicera utahensis*, *Menziesia ferruginea*, *Pachistima myrsinoides*, *Penstemon fruticosus*, *Prunus emarginata*, *Ribes lacustre*, *Ribes viscosissimum*, *Rosa gymnocarpa*, *Rubus leucodermis*, *Salix scouleriana*, *Sambucus racemosa*, *Shepherdia canadensis*, *Sorbus scopulina*, *Symporicarpos oreophilus*.

Herbaceous plants: *Aster engelmannii*, *Clematis columbiana*, *Lonicera ciliosa*, *Lupinus argenteus* and *sulphureus*, *Pedicularis contorta*, *Phacelia hastata*.

Rhizomes:

Shrubs: *Rubus parviflorus*, *Spiraea betulifolia*, *Symporicarpos albus*, *Vaccinium globulare*, *Vaccinium membranaceum*, *Vaccinium scoparium*.

Herbaceous plants: *Achillea millefolium*, *Agrostis alba*, *Anaphalis margaritacea*, *Apocynum androsaemifolium*, *Aralia nudicaulis*, *Arnica cordifolia*, *Arnica latifolia*, *Asarum caudatum*, *Aster conspicuus*, *Berberis repens*, *Calanagrostis rubescens*, *Carex concinna*, *Carex geyeri*, *Clintonia uniflora*, *Disporum hookeri*, *Epilobium angustifolium*, *Galium triflorum*, *Luzula hitchcockii*, *Pteridium aquilinum*, *Pyrola asarifolia*, *Pyrola secunda*, *Silene menziesii*, *Smilacina racemosa*, *Smilacina stellata*, *Solidago canadensis*, *Thalictrum occidentale*, *Tiarella trifoliata*, *Trautvetteria caroliniensis*, *Viola adunca*, *Xerophyllum tenax*.

Deep, Underground Stems:

Herbaceous plants: *Calochortus apiculatus*, *Claytonia lanceolata*, *Erythronium grandiflorum*, *Habenaria elegans*, *Lilium columbianum*, *Trillium ovatum*.

SEED/FRUIT

Short Viability (cones in the tree):

Trees: *Abies lasiocarpa*, *Pinus contorta* (non-serotinous), *Pinus monticola*, *Pseudotsuga menziesii*.

Long Viability (heat treatment required, tree or ground stored):

Trees: *Pinus contorta* (serotinous).

Shrubs: *Ceanothus sanguineus*, *Ceanothus velutinus*, *Ribes lacustre*, *Ribes viscosissimum*, *Sambucus racemosa**

Herbaceous plants: *Carex rossii**, *Dracocephalum parviflorum**, *Ilima rufula**, *Geranium bicknellii**

*Provisional

¹Not observed in initial flora.²Key to appendix symbols:

N Nonsurvivor.

P Reforestation transplant.

R Survivor, regrowing from burned plant.

S Colonizer, seedling first positive year.

X Present first year; postfire origin unascertained.

* Flowering first positive year.
