## **Kaibab National Forest seeks input on proposed changes to management of grazing allotment on Tusayan Ranger District**

**Tusayan, Ariz., Jan. 20, 2016—For Immediate Release.** The Kaibab National Forest is seeking public input on a proposal to make changes to management of the Anita/Cameron grazing allotment on the Tusayan Ranger District.

The proposed action, which is available on the Kaibab National Forest website at <http://www.fs.usda.gov/project/?project=48309>, includes the proposed number of livestock, period of use, and range improvement infrastructure for the allotment, which consists of 205,538 acres of national forest available for grazing. The allotment is located east and southeast of the Town of Tusayan.

The purpose of the proposed action is to authorize livestock grazing consistent with Forest Service policy and in a manner that maintains or improves resource conditions, promotes ecological resiliency across the landscape, and provides long-term management direction for domestic livestock grazing.

The proposed action also incorporates flexibility into the management of the allotment in order to allow the Forest Service and individual grazing permittees to better adapt management to changing resource conditions and the achievement of management objectives.

Members of the public are encouraged to review the proposed action for the Anita/Cameron grazing allotment and provide comments by Feb. 24. The proposed action and information on how to comment are available on the Kaibab National Forest website at <http://www.fs.usda.gov/project/?project=48309>.

It is Forest Service policy to make forage from national forest lands suitable for grazing available to qualified livestock operators and to continue contributions to the economic and social well-being of people by providing opportunities for economic diversity and by promoting stability for communities that depend on range resources for their livelihood.
