

Alamocito
 Quemado Ranger District
 2016 Annual Operating Instructions
 (01/05/2016)

As per your Annual meeting held with Wayne Witty, please see the following instructions. Please utilize these instructions as direction for management on your grazing allotment during the 2016 Grazing Season. We appreciate your cooperation in the management of your livestock throughout the grazing year.

2016 Pasture Rotation:

PASTURE	FROM	TO	NUMBER	ALLOWABLE USE
North	03/01/16	05/14/16	50	40%
South	05/15/16	07/15/16	50	40%
Canyon	07/16/16	11/30/16	50	40%

Allowable Use:

Proper utilization of forage plants is a necessity to maintain long term productivity of the rangeland and to protect soils from erosion. Proper utilization will maintain sufficient ground cover to prevent erosion and meet the physiological needs of key forage plants for maintenance and reproduction over the long term. Allowable use is determined from considering proper use and all influencing factors such as grazing system, range condition, watershed condition, timing and duration of livestock use and scheduled amount of rest between use periods.

The Decision Notice dated September 1, 1995 established guidelines of 40% as the maximum allowable utilization by grazing animals.

Utilization Monitoring:

Utilization monitoring will be conducted on or near key areas of your allotment. District personnel will monitor pasture use and determine utilization percentage at that time. Monitoring dates will be set according to the previous year's monitoring results. If pastures were approaching allowable use during the 2015 grazing season they will be monitored at the mid-point of the pasture use period to determine if it is necessary for livestock to be moved to the next pasture in the rotation. Please note the following approximate dates that are scheduled for monitoring on the Alamocita Allotment. You are encouraged to participate in monitoring utilization levels.

2016 Monitoring Dates:

Pasture	Monitoring Date
North	05/12/16
South	07/23/16
Canyon	12/02/16

If any one key area in a pasture being grazed by livestock exceeds utilization on the uplands or woody riparian plant sprouts/seedlings, livestock will be moved to another area of the pasture where actual use is less than allowable use. If all remaining key areas in the grazed pasture are at allowable use, livestock will be required to be moved early to
