

Butterfly on woolly sunflower (Eriophyllum lanatum)

Leave the Flowers for Others to Enjoy!

Everyone has a right to enjoy the splendor of wildflower displays. Picking wildflowers and plants affects population health by reducing the production of seed . Transplanting wild-flowers, by digging plants, is rarely successful and against policy without a permit. Take photographs and leave the flowers for others!

The Marble Mountain Wilderness Area

The Marble Mountains are a beautiful, pristine wilderness area in the heart of the Klamath National Forest. This guide contains the more common wildflower species that you can expect to see throughout the Marbles. Amazing displays of wildflowers can be seen along most trails from July to August, and the highest number of wildflower species can be found in open meadow or rocky areas. If you travel off established trails, do not blaze trees or build rock piles to mark your route, and spread out to avoid forming new footpaths. Within the wilderness you should expect to find no shelters, picnic tables, facilities, or other conveniences. Self-sufficiency is a priority in wilderness travel. For maps and more information visit the Salmon/Scott River Ranger District Office, or http://www.fs.usda.gov/klamath/.
