Harley, Lorraine and Kenneth Bates
PO Box 234
Moab, Utah 84532

**CERTIFIED MAIL – RETURN
RECEIPT REQUESTED**

Dear Mr., Mrs. and Mr. Bates:

This letter will serve as your Annual Operating Instructions (AOI) for the Castle Valley C&H Allotment for the 2016 grazing season. This AOI is made part of your Term Grazing Permit consistent with Part 1, item 3 and Part 2, item 8(a). A failure to follow these instructions is a violation of your permit. The AOI complies with the standards and guidelines found in the Forest Plan. **Please read your instructions thoroughly.**

AUTHORIZED USE FOR 2016

| Allotment | Numbers | Kind | Class | Season | Permittee | Non-use | |
|-------------------------|---------|--------|------------------------|-------------------------|-------------------------------------|---------------------|----------------------|
| | | | | | | Resource protection | Personal convenience |
| Castle Valley (Pinhook) | 100-181 | Cattle | Cow/calf | Between 05/08 and 10/01 | Bates, Harley, Lorraine and Kenneth | | |
| Castle Valley (Mesas) | 200 | Cattle | Cow/calf and Yearlings | Between 06/01 and 10/20 | Bates, Harley, Lorraine and Kenneth | | |

GRAZING SYSTEM AND SCHEDULE

Pinhook portion:

| Pasture | Number | Kind | Approximate Dates |
|---------------|--------|------|-------------------|
| Lower Pinhook | 100 | C/C | 05/08 – 05/31 |
| Upper Pinhook | 181 | C/C | 09/01 - 10/01 |
| Miners Basin* | 181 | C/C | 09/01 – 10/01 |

*Miners Basin may be used with Upper Pinhook, so the whole herd would not be using this unit, just a portion. Early snow could prevent much use.

Mesas portion:

| Pasture | Number | Kind | Approximate Dates |
|---------------------------------------|--|-------------------|-------------------|
| Adobe Mesa/Fisher Mesa | Used in conjunction with BLM- will try to stay on these Mesas till June 15 th or up to July 1 st , depending on water. | | |
| West Andy | 200 | C/C and Yearlings | *06/15 – 07/10 |
| East Andy | 200 | C/C and Yearlings | *07/11 – 08/04 |
| Private Land Sec 36 (off of Forest)** | 200 | C/C and Yearlings | *08/05 – 08/31 |
| Willow Basin# | 200 | C/C and Yearlings | 09/01 – 09/25 |
| Bachelor Basin# | 200 | C/C and Yearlings | 09/26 – 10/20 |

Permitted pack and saddle stock authorized on the allotment for livestock management will not exceed four head.

*These dates are based on the assumption that livestock will be able to use Fisher and Adobe Mesas till June 15th. Adjustments will be made if there is not enough water and livestock need to enter West Andy on June 1. **This is private land and use here is not billed and is not part of permitted AUMs. They have been included in the AOI for information purposes only. # There are no fences between these two units, separation will be done through riding and salting, there may be some cattle that are in one of the other unit between 9/1 and 10/20.

Best Management Practices

The degree grazing affects future forage production and rangeland health will depend upon intensity, frequency and timing of grazing. Providing plants opportunity to grow and adequate recovery from grazing will have a great influence on long term vegetative productivity and rangeland conditions. It is extremely important that the allotment is monitored closely, which may involve an increase in the amount of riding you or your herd manager does.

West and East Andy have been used in June and July for several years. This was discussed during the AOI meeting and a solution of using Adobe and Fisher Mesas into June and maybe till July 1st to delay use on West Andy was planned. In 2015, the plan for West Andy was also to using salting and water as much as possible to use the south end of the unit. **In 2016**, you will herd and salt so as to use the **north end** of the unit more. This way we can try to achieve a change in time of year use by “splitting” the unit in this way.

Management may need to be adjusted depending upon actual conditions on the ground.

Your allotment should be inspected for range readiness to determine forage growth and fence and water improvement conditions. **The pasture move dates shown above are an estimate, and may change on the basis of actual range conditions.** Situations may develop during the grazing season which requires changes to these instructions. If this becomes necessary, or if you cannot comply with some part of these instructions, contact the District Ranger and obtain approval before initiating changes or deviating from these instructions.

PROPER GRAZING-USE INDICATORS

Utilization standards, such as riparian stubble height and upland utilization, are a couple of the indicators used in achieving or moving towards desired rangeland conditions. This is especially true if the patterns and levels of use have been consistent and repetitive over a number of years. They are also valuable for interpreting the cause of unsatisfactory trends in rangeland conditions and assisting in the determination what adaptive management adjustments (annually or long-term) need to be made for an allotment. They are not the desired conditions or the management objectives themselves. Actual desired conditions and objectives are discussed in the 1986 Forest Plan and/or the Castle Valley Allotment Management Plan.

Utilization indicators are displayed in the Forest Plan and allotment grazing authorization decisions, as a type of performance standards. The term standard implies that some form of management actions will be implemented to resolve an identified problem and provide for meeting the desired condition, goals, and objectives identified in the Forest Plan or Allotment Management Plan. Management actions are typically developed through some form of adaptive management process during Allotment Operation Instruction meetings and/or during the Allotment Management Plan development. Both within-season and end-of-season use indicators or standards, along with other required management practices (such as managing duration and timing of grazing), are a total package that, when implemented and adhered to, will result in a reasonable expectation that long-term desired condition objectives will be achieved.

Desired goals in the 1986 Forest Plan include:

- Bring livestock obligation in line with rangeland carrying capacity
- Maintain upward or stable trends in vegetation and soil condition.

Management Objectives in the 1995 Castle Valley Allotment Management Plan include:

- Improve the forage resource, increase desirable plant species; and maintain ground cover (vegetation and litter) at a level the will maintain the allotment's natural resources at its desired future condition.
- Improve and/or maintain the Lower Pinhook riparian area.

The 1990 Forest Plan Amendment for Range Proper-Use Criteria states proper use as ranging from 40-65% use of upland key species depending on the grazing system applied and from 30-60% use of riparian key species depending season of use. This amendment kept the existing provision that proper use criteria are to be established on an allotment by allotment basis and as given in the AMP and AOIs.

The intent is not that each pasture unit should be grazed to the maximum level each year. Intensity can be controlled by controlling the duration of time that livestock are grazing an area. In large pasture units, with long duration times (more than 2 to 3 weeks) this can be a challenge. However, some control of duration within a pasture can be done by riding, salting and when possible controlling access to water.

It is your responsibility as the permittee to recognize if use levels are reaching the maximum and promptly move all cattle as necessary. If you need some assistance, or methods and tools for determining proper use, please contact Tina Marian.

| | |
|---|--|
| For the Castle Valley allotment proper use criteria for 2016 are: | |
| <u>Upland Areas:</u> | <u>Use of Key Species</u> |
| Spring/Summer | 45-50% |
| Fall | 50-60% |
| Use levels on perennial bunchgrasses in Lower Pinhook must be kept below 40% to facilitate continued recovery from the fire. | |
| <u>Riparian Areas:</u> | <u>Use of Key Species</u> |
| Spring (Early and rapid growth) | 50-60% |
| Summer (Moderate growth) | 45-50% |
| Fall (Slow growth) | 30-40% or 4-5 inches stubble or regrowth |

If proper use has been reached in the unit being grazed before you are scheduled to move on as planned in this letter, your cattle are to be herded to the next scheduled unit. **When proper use is reached in the last unit grazed, all cattle are to be removed from the allotment, even if this date is prior to the end of your grazing season.** Cattle found on the Allotment before or after the permitted grazing season will be billed at the unauthorized use rate and permit non-compliance actions will be initiated.

You should be aware that Forest Service policy provides that “an authorized officer may require the permittee to monitor and report information on compliance with the grazing permit, allotment management plan and annual operation instructions as a term and condition of your permit.”

To facilitate livestock moves, gates may be opened a few days prior to the scheduled move date only when moving into an adjacent pasture. Gates must be closed and the grazed pasture entirely cleaned of livestock no later than five days following the scheduled move date. **Grazed pastures must be kept clean of livestock following a pasture move.** This is important to plant recovery after being grazed, especially in areas that cattle are drawn to.

Please use the Grazing Response Index enclosed in your folder to track duration of use, intensity of use and time of use for each grazing unit. This is a helpful tool in assessing grazing impacts to the range vegetative resources.

STRUCTURAL IMPROVEMENTS

Since 2006, the Forest Service has entered into structural improvement agreements with each permittee which will continue for this season. The purpose of these agreements and the

following inspections is to document how and if range structural improvements are being maintained.

Thank you for completing and sending in photos of your 2015 fence and spring maintenance agreements.

2016 FENCE AGREEMENT: You agreed that the Mason Draw/Pinhook Bndry fence (#42016 in permit) will be the agreed upon fence to inspect and make sure it is to permit standards as shown on the attached map.

2016 SPRING AGREEMENT: Bull Draw spring (#44167 in permit) enclosure will be expanded and the trough moved out of the depression, per the La Sal Springs EA decision. As well, the Pinhook water developments will be installed this year and the improvement added to your permit.

When you complete your fence and spring/pond agreements you must fill out and sign the Improvement Agreement Form (pink) that is found in your folder. Please provide photographs of before and after conditions to assist in documenting compliance with maintenance requirements. Contact Tina when you complete your maintenance so she can schedule a timely inspection.

If you fail to bring the above agreed improvements up to standard by **October 20th, 2016** you will not be allowed to stock the allotment in 2017 until the agreement is fulfilled.

Range improvements are essential in ensuring that livestock are well distributed and that Forest standards and guides are met.

- Improvements are to be maintained to standard prior to livestock entering the pasture and that failure to do so is a violation of their permit and action will be taken when violations are documented.
- If improvements have not been maintained, then develop a schedule to bring them up to standard.
- Until all improvements are functional it is not appropriate to authorize full numbers or season of use, unless assurances can be made that utilization standards will not be exceeded.

The maintenance of all structural improvements listed under part 3 of your Term Grazing Permit, Special Terms and Conditions: *Construction and Maintenance of Structural Improvements* is a requirement and should be completed prior to your entry into each pasture. The allotment permittee(s) are responsible for the maintenance of all structural range improvements on this allotment. For allotments managed by an Association or Herd Manager specific maintenance responsibilities may be assigned to individual permittees by the Association President or Herd Manager.

There are many troughs on the Forest that do not have wildlife escape ramps and are thus not meeting improvement maintenance standards. All troughs on the allotment need to be

equipped with a wildlife escape ramp. You can obtain them from the Forest Service office. We understand that this will not all be completed in one year and will be emphasizing getting wildlife escape ramps installed in all troughs over the next few years.

If you wish to use forest products (trees and oak brush) from the National Forest to maintain your fences/spring exclosures on your allotment, you must receive authorization from either the Moab or Monticello Office prior to cutting.

NEPA and PLANNED PROJECTS

The La Sal Springs Protection and Water Development EA is completed and the Decision Notice will be signed in May. The water rights for the Pinhook troughs have been applied for. No diversion of the water to the troughs may occur until the water right is obtained.

As of now, there are no plans to continue The Willow Basin Fuels Reduction project this summer. It will be continued in following years.

MISCELLANEOUS

Refer to Special Terms and Conditions in Part 3 of Term Grazing Permit for specific instructions pertaining to maintenance standards for range stock water developments, range fences, corrals, and herding standards.

All permitted livestock must be branded with your registered brand as documented in your Term Permit before they enter the National Forest.

Place salt blocks away from water, roads, meadows and other open areas so as to draw livestock into areas that receive light utilization. When livestock leave a pasture move the salt out of the pasture as well.

You will furnish sufficient riders or herders to achieve proper distribution of livestock.

Certified Weed Free Hay must be used if you do any supplemental feeding of horses on the allotment while gathering or moving cattle.

If you find the need to use mechanical clearing (tractors, bulldozers etc.) of fence lines or to clean ponds or other water improvements, you must have proper archeological clearance and permission from the District Ranger.

Enclosed in your AOI folder you will find an Actual Use Record sheet. As your 2016 grazing season progresses, please fill out this form in detail and return it promptly at the end of the grazing season. There are also extra sheets included in the folder where you are encouraged to document management on the allotment.

PAYMENT OF FEES

The permittee will not allow owned or controlled livestock to be on Forest Service-administered lands unless the fees specified in the Bill for Collection are paid and confirmation of payment is received prior to livestock entering NFS lands.

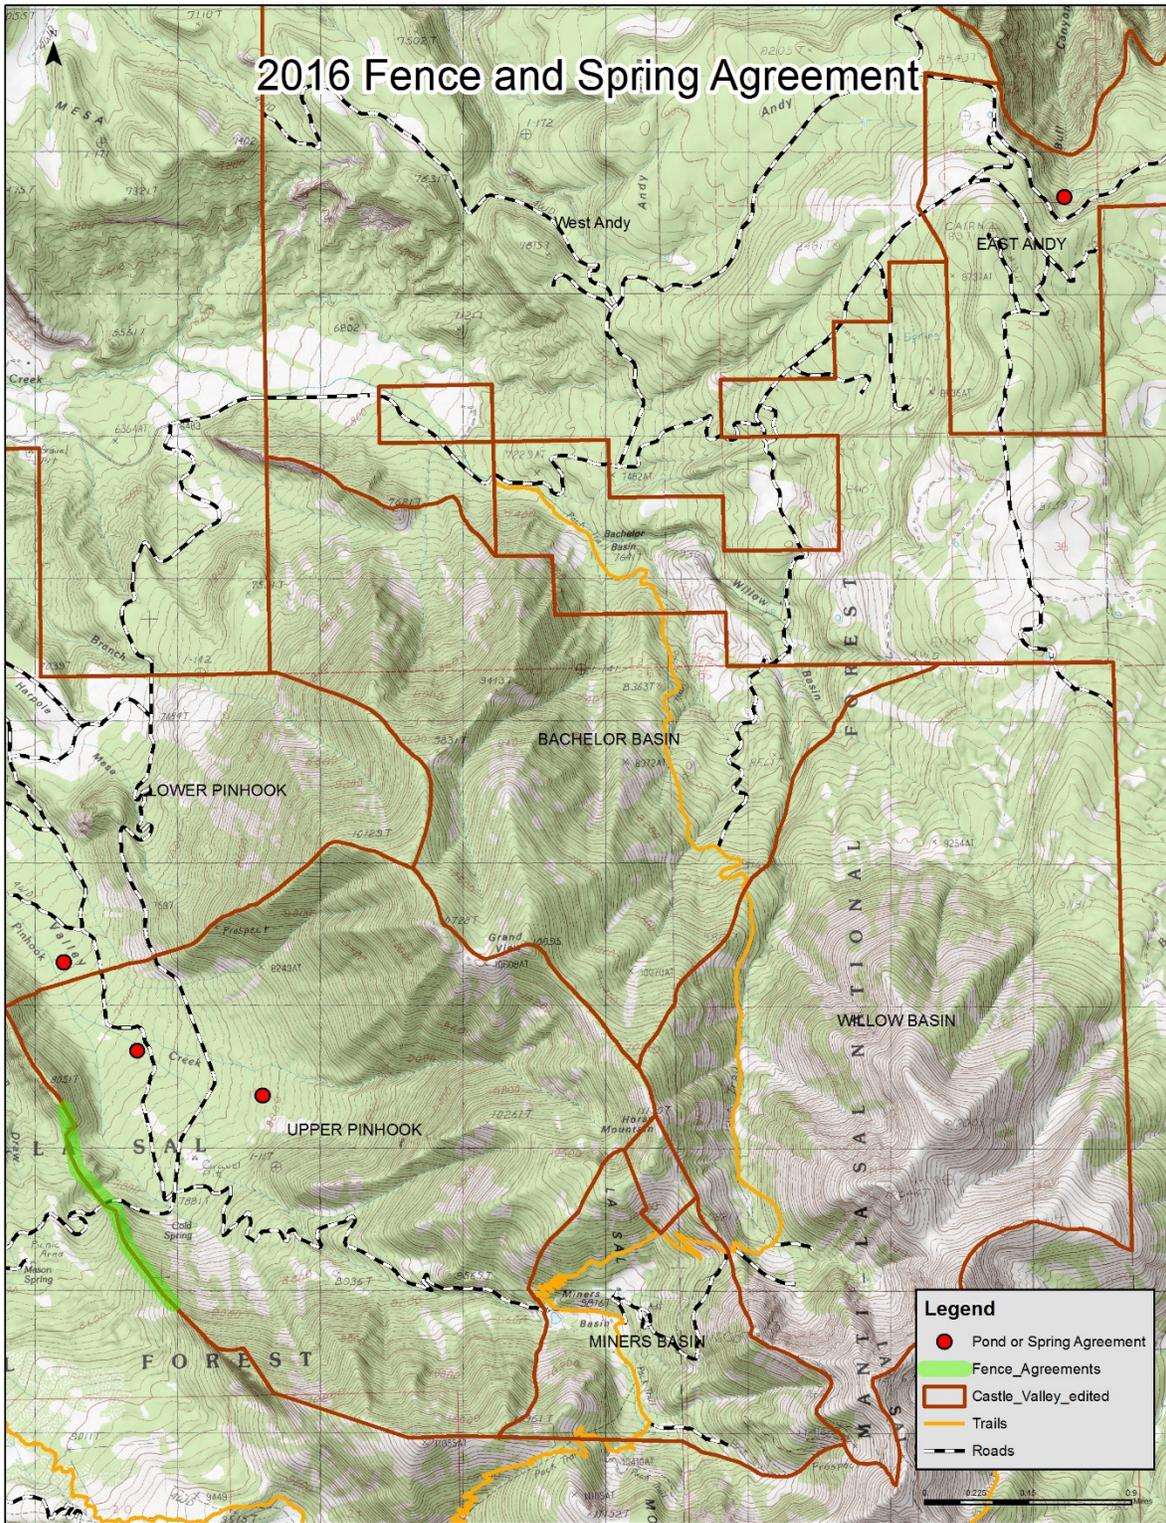

I am looking forward to working with you this summer. Please don't hesitate to call Tina Marian (435-636-3368) if you have any questions or if we can be of assistance.

Sincerely,

for MICHAEL DIEM
District Ranger
