

Appendix A

Annual Maintenance Schedule

The Bighorn National Forest Annual Trail Maintenance Schedule is developed based on the Trail Ratings in Appendices D, E, and G. Annual Maintenance consists of Priority 1 and 2 level items, as defined in FSH 2309.18-91-2, Chapter 4.26. This includes but is not limited to correcting all unsafe conditions relative to management objectives and to minimize unacceptable resource damage. Annual Maintenance is focused on the High rated pods but maintenance of other trails in the vicinity may be included in the Annual Maintenance Schedule to be most efficient in scheduling. Depending on available budget, staffing and work load, it is intended that Trail Class 3 and 4 trails in the High rated Pods will be maintained once every 2 years, Trail Class 3 and 4 trails in the Moderate and Low rated Pod Trails will be maintained once every 5 years. All Trail Class 1 and 2 in all Pods will be maintained every 9 years.

High Pod Calculations:

High Pods	Class 3 and 4 trail miles
Tensleep #12	28.8
Clear Creek #2	44.8
Little Goose #4	64.5
Tongue #6	21.7
Battle Park #11	63.6
Total Miles	223.5

Estimates of yearly accomplishments are based on a seven-year average from 2006 to 2012. During this time, the Bighorn National Forest employed, on average, a three person crew for 72 days per summer. This time includes three weeks of annual training required for seasonals which reduces work time to 51 days. The crew can accomplish 2.7 miles per day which calculates to 82.8 days to complete the 223.5 miles of trails in the High Pods. At 51 days of field work per summer, it results in approximately 138 miles per year or approximately two field seasons to complete the highest priority trails listed above.

Moderate Pod Calculations:

Moderate Pods	Class 3 and 4 trail miles
Flat Iron # 3	90.6
Walker Prairie #5	93.1
Porcupine #8	17.9
Shell #10	60.1
Powder River #1	8.8

Low Pods	
Dry Fork #7	59.8
Beaver Creek #9	41.1
Leigh Creek #13	3.8
Total Miles	375.2

Estimates are calculated the same as for the High Pods. At 375.2 total miles divided by 138 miles per season, it will take approximately three field seasons to complete these trails.

All Pods – Class 1 and 2 trails:

All Pods – High, Moderate, Low	Class 1 and 2 trail miles
Total Miles	162.7

Estimated seasons to complete the Class 1 and 2 trails is 162.7 miles divided by 138 miles per season. It will take approximately one season to complete Priority 1 and 2 level maintenance on these trails.

By these estimates a completion of Priority 1 and 2 level maintenance on the Bighorn National Forest will require approximately six field seasons. Maintenance seasons can further be reduced by special trail projects or fire assignments for the trail crew. Weather and other factors can effect a field season as well. The time frame to complete a full maintenance cycle on the Forest could be reduced if trail crew employees had a longer season of employment and there was a Permanent Part time trail crew leader. Much time and money is spent on the yearly training of new seasonal employees. If seasonals were able to remain hired in the fall an additional 20 to 40 days of trail work could be accomplished. This would reduce the maintenance cycle by about 30 to 50%.

Appendix B

Heavy Maintenance/Construction/Reconstruction Projects

Using the most recent ratings on the Reconstruction/Construction tab of the forest-wide trail rating spreadsheet, the top scoring trails and Forest priorities are:

Trail Pod Rating	Trail Pod Number	Trail Name	Trail Rating	Remarks
High	4	Stockwell #086	13	NEPA done, Heavy Maintenance, TONG
Moderate	8	Bucking Mule Falls #053	13	NEPA needed, Heavy Maintenance, MWPR
High	4	Kenny Wood #628	11	NEPA needed, Heavy Maintenance, TONG
High	4	North Piney #112	11	NEPA done, 5 on safety, TONG
High	4	Solitude Loop #038 (Beaver Lakes)	11	NEPA may be required, Heavy Maintenance, TONG
High	2	Solitude Loop (slough near Florence Pass)	11	Heavy Maintenance, need hydro and engineering support, 5 on safety, PR
High	4	Bishop Mine #624	11	Heavy maintenance At water crossings, 5 on resource pro, TONG
High	4	Square Park #623	11	Heavy maintenance at water crossings, 5 on resource pro, TONG
High	12	Highline #067	9	NEPA needed-Reroute around East Tensleep Lake and relocate parking area, PR
Moderate	3	Middle Rock Crk. #043	7	Maintenance, PR- Add to FY16 maintenance list for trail crew.
High	11	Edelman #025	7	NEPA needed-Connect trail to trailhead, MWPR

Project Descriptions

Stockwell (Trail #086)

Location of work: T53N, R85W, Sections 28, 27 & 24.

Type of use allowed on trail: Primary OHV 50" or less in width- hiking, horse, mountain bike

Project Purpose: Improve trail tread, user experience, and control erosion.

Project Description: Repair wet sections of trail and relocate as needed away from streams.

Bucking Mule Falls (Trail #053)

Location of work: Various segments of the entire trail in R92W, T56&57N.

Type of use allowed on trail: Primary Hiking and Horse- mountain bike

Project Purpose: Improve trail tread and sustainability.

Project Description: Clearly mark trail, repair signs, install drainage, and reroute & reconstruct segments of trail. Project was evaluated in the field August, 2011.

Kenny Wood (Trail # 628)

Location of Work: Three separate sections along the Kenny Wood trail. The trail is accessed from FSR #313 and #314 approximately one mile north of Little Goose Falls Trailhead in T53N, R85W.

Type of use allowed on trail: Primary OHV 50" or less in width- hiking, pack & saddle, mountain bike

Project Purpose: A 3.5 mile section of FST #628 runs between FSR #313 and FST #86. This trail receives ATV use. From FSR #313, it drops steeply into Black Canyon. The trail meanders back and forth across the creek. This segment of the trail has become so rough that users have created alternate routes to pass through the lower part of the canyon. The remainder of the trail needs reconstruction with short segments of relocation.

Project Description: During the 2007 field season the engineering crew repaired the switchback section above Black Canyon and made several improvements in the tread between there and the trail beginning. They installed water bars and widened segments of the tread.

There are still several segments past the switchbacks to the junction with the Stockwell Trail #086 that need drainage and an segment needs rerouted to avoid an excessively steep hill and erosion.

North Piney ATV (Trail #112)

Location of work: The beginning terminus is of FST #112 is in section 36 where it meets FST #28 in T53N, R83W.

Type of use allowed on trail: Primary OHV 50" or less in width – hiking, pack & saddle, mountain bike

Project Purpose: From FST #28, ¼ mile east of the Penrose Guard Cabin FST #112 splits off to the north and parallels the Stockwell and Piney drainages for 3.6 miles down stream to the Forest boundary. The northern two and one-half mile section of this trail lays in the flat floodplain of the stream with limited drainage opportunities. The trail closely parallels the creek and crosses it numerous times. This narrow space between the trail and the creek limits the vegetation needed to filter trail sediment. Trail users spread out seeking a smoother route in-order to avoid the worn rough segments or to cross streams and/or wet areas. The users have created a wide multiple route system which is a major contributor of sedimentation to the waterways.

Project Description: Work includes excavation, installing drainages, constructing tread base, laying filter cloth, building turnpikes, applying surface aggregate, and hardening stream crossings. Heavy maintenance will occur on two and one-half miles of tread surface. Additional NEPA may be required due to work on stream crossings.

Heavy maintenance of this trail to meet handbook standards will improve water quality and user satisfaction. Project was evaluated in the field September 2011. Work to improve the tread in one section with a high side-slope was completed in September 2012.

Solitude Loop (Trail #038) Beaver Lakes Segment

Location of work: The segment between FST #033 and Kearney Lake, T52N R85W S23 & 22.

Type of use allowed on trail: Primary-Hiking - pack & saddle, OHV 50" or less in width.

Project Purpose: A segment of this trail is narrow (considerably less than 50 inches) and bound by rocky cliffs on one side and a steep drop-off to Kearney Creek on the opposite. There are also several sections that need turnpikes constructed to prevent water and seepage from eroding the surface. Water is seeping from springs and Kearney Creek and running down the trail bed trenching and eroding its surface. Boggy seeps have created a muddy unstable tread in other areas. The trail is very close to the creek and most likely, portions are submerged during spring run-off. The trail was closed to motorized use in 2012.

Project Description: Work to relocate this trail away from the Kearney Creek and to construct turnpikes with ditches and culverts to remove water from tread is the focus. Drainage structures need to be constructed along the entire length and basic maintenance to remove brush and obstacles needs performed. This project requires blasting and rock work. If reroutes are decided upon environmental planning will need to be completed.

Solitude Loop (Trail #038) Slough Near Florence Pass

Location of work: The northwest end of Medicine Park in T50N, R86W, Section 1, Bighorn National Forest, Johnson County, Wyoming (Lake Helen quad)

Type of use allowed on trail: Primary-Hiking- pack & saddle

Project Purpose: An approximately 25' slough has developed near Medicine Park where the trail follows North Clear Creek. Brush has been removed, the upper slope has been cut back as far as possible and a few drain dips have been constructed. Above the trail, the slope appears to have avalanche debris and there is a seep or spring running across the trail at this location. Below the trail the ground drops sharply to the creek. The tread has narrowed to approximately 10 to 18 inches and the upper slope has limited shoulder clearance for horse packing.

Project Description: The tread needs widened. Consultation with hydrologists and engineers would be wise due to the spring and unstable nature of the upper slope.

Bishop Mine (#624)

Location of work:

Type of use allowed on trail: Primary-OHV 50" or less in width- pack & saddle, hiking, mountain biking

Project Purpose: The trail is heavily used by motorized vehicles and has developed several low spots that hold water throughout the use season. There are multiple places where the trail is deeply trenched and large rocks protrude into the trail surface. Braiding and trail widening has occurred due to these trouble areas.

Project Description: The tread needs repaired by pulling in and filling the trenches, constructing drain dips and hardening stream crossings.

Square Park (#623)

Location of work: T53N, R86W, Section 25 & R85W Section 30

Type of use allowed on trail: Primary- OHV 50" or less in width- pack & saddle, hiking, mountain biking

Project Purpose: To repair damage from heavy use and poor drainage.

Project Description: Complete reroutes, repair trenched sections of tread, install drainage structures, and harden stream crossings.

Highline (Trail #067)

Location of work: T49N, R86W, Section 14, off FSR 430 at East Tensleep Lake.

Type of use allowed on trail: Primary- Pack & saddle-, hiking, mountain biking

Project Purpose: To reroute trail at East Tensleep Lake to a higher elevation and reduce resource issues and confusion for users.

Project Description: Where the trail currently begins it is boggy and wet near East Tensleep Lake. The trail appears to begin on the shores of a pond, which the trail goes through the middle

of. The reroute would locate the trail on a higher more sustainable elevation where it will remain dry during the use season. The proposal also includes moving the parking area to reduce confusion and illegal motorized use. This project will require environmental planning.

Middle Rock Creek (Trail #043)

Location of work: In Rock Creek Recommended Wilderness Area. The trail begins at the junction of FST 038 and ends at the junction with FST 041.

Type of use allowed on trail: Primary Pack & Saddle - hiking, mountain bike

Project Purpose: The trail is located within the Rock Creek Recommended Wilderness Area. The Forest has made it a priority to get the main trails maintained to standard.

Project Description: The trail needs cleared, brushed out and drainages maintained. The trail crosses the creek several times and is located in a narrow drainage. The trail could be relocated on the dry bench above the drainage. NEPA will be required if relocations are required.

Edelman (Trail #025)

Location of work: T51N, R87W, Section 6. Off Paintrock Lakes Road, FSR 17 near the Edelman Trailhead.

Type of use allowed on trail: Primary-Pack & Saddle- hiking, motorcycles allowed for the first half mile.

Project Purpose: To connect the trailhead to the trail and reroute the trail out of a wet meadow.

Project Description: The existing trail is in an open boggy meadow; it needs to be rerouted and have puncheon or other features constructed to reduce erosion and soil displacement. To construct a route that connects the trail and trailhead. The possibility of routing the trail out of the north side of the trailhead through an existing gate was reviewed by the trail coordinator and lead wilderness ranger August, 2011. This option is not viable- see Bob Cochran. The existing trail is in an open boggy meadow; it needs to be rerouted and have puncheon or other features constructed to reduce erosion and soil displacement. Project will require environmental planning.

Cottonwood Canyon (Trail #811)

Location of work: The project entails adding the Cottonwood Trail northeast of the state land to the Bighorn NF system of trails and constructing new system trail west and northwest of the state land to Forest Road 119.

Type of use allowed on trail: Primary-Hiking- Pack & Saddle

Project Purpose: When completed, the trail would provide the recreational experience of hiking or riding from the floor of the Big Horn Basin through Cottonwood Canyon to the heights of the Bighorn Mountains.

Project Description: This project entails purchasing an easement for the Cottonwood Trail from the Wyoming State Land Board. This proposed trail would link the Cottonwood Trailhead (which has corrals, developed trailer parking and picnic tables) and Cottonwood Trail on BLM land to the Cottonwood Trail on the Forest. Approximately 1/2 - 3/4 miles of trail would be constructed on an open hillside requiring primarily tread work. Approximately 1/4 mile of trail would be constructed through an aspen stand. This would require some falling, bucking and tread work. Some trail clearing and tread work on existing non-system trail would be required. Project was evaluated in the field Summer 2010.

Meadowlark Lake Loop (Trail #)

Location of work: T49N, R86W, Sections 5, 6, 32, & 33. The trail is planned to be located around Meadowlark Lake off of HWY 16.

Type of use allowed on trail: Primary-Hiking- Accessible trail

Project Purpose: To increase loop trail opportunities and construct the first accessible trail on the Forest.

Project Description: Construction of a loop trail around Meadowlark Lake. Currently, there is a decommissioned road and user-created trails from the boat launch to Lake Point picnic ground. The grades range from 4% to 10%. Side slopes are significant when path leaves road (30-40%) and goes toward the dam. There are approximately three areas where the trail will need a foot bridge. We also want to construct at least one accessible fishing platform. The project was evaluated summer of 2010. This project is awaiting archaeological clearance to finalize environmental planning.

Lodge Connector (Trail #)

Location of work: T55N, R88 & 89W, connecting Bear Lodge and Arrowhead Lodge.

Type of use allowed on trail: Primary- OHV 50" or less in width- pack & saddle, mountain biking, hiking

Project Purpose: To create an opportunity for ATV riders to travel between lodges without creating resource damage and riding in the highway right-of-way.

Project Description: The new trail will follow old closed roads where possible with minimal (if any) tree removal. Stream crossings will be hardened or puncheon will be constructed to minimize disturbance. The project requires environmental planning.
