Tobin Fire Morning Update

TOBIN FIRE QUICK FACTS			
Acres	248	Engines	14
Containment	55%	Helicopters	3
Crews	10	Fixed-wing aircraft	As Needed
		Dozers	1
TOTAL RESOURCES ASSIGNED			544

QUINCY, California – September 30, 2016 – The Tobin Fire is located on the Plumas National Forest, in the Feather River Canyon north of Hwy 70. The cause of the fire is yet to be determined.

This will be the last update from Northern California Interagency Incident Management Team 2. As of 6am tomorrow, October 1, 2016, the Tobin Fire will be managed by a Type 3 organization. Continued updates will be posted as needed to <http://inciweb.nwcg.gov/incident/5043/>.

The fire showed minimal activity overnight. Yesterday, crews worked to tie in direct containment line on the northeast corner of the fire. As of this morning, that is the only remaining piece of open fireline, and crews anticipate completing that today. They will also work to mop up (extinguish any remaining heat sources within close proximity to firelines that could threaten containment) and remove any excess equipment and trash from the fireline.

The Tobin Fire is burning within the footprint of the 2000 Storrie Fire, and the vegetation in the area is primarily brush and snags left from that fire. The steep, rocky terrain and multiple fire-weakened snags are hazardous to firefighters.

Weather is predicted to be cooler today, as a system pushes into the fire area from the west. A few scattered clouds are expected today. Temperatures in the fire area are expected to be between 68 and 75 degrees, with winds between 5 and 10mph, gusting on ridgetops to 15 mph. Even cooler temperatures and higher relative humidities should arrive overnight, with a chance of precipitation on Sunday.

Hwy 70 is open, as well as all Feather River Canyon campgrounds and local businesses. Please be cautious while driving the highway due to increased fire equipment traffic. A temporary flight restriction (TFR) remains in place over the fire today.
