

# VEHICLES CAN CAUSE WILDFIRE

-  **Never Park or Drive on Dry Vegetation** - There are hot components under vehicles, that when in contact, can cause fires.
-  **Check for Dragging Equipment** - Secure trailer chains and double check under your vehicle and trailer.
-  **Properly Inflate Tires** - If you hit a bump on the road/trail, the wheel can compress, make contact with the ground, and throw sparks.
-  **Maintain Spark Arrestors** - Internal combustion engines (that are not highway vehicles) require a spark arrestor. Know how to check and clean them.
-  **Check Your Brakes** - Severely worn brakes can result in metal on metal contact.
-  **Be Ready** - Always carry a shovel or fire extinguisher in your vehicle or OHV.

**ONE LESS  
SPARK  
ONE LESS WILDFIRE**
