A Lego Animal Park Is the Way to Go

My name is Meadow I am 12 years old. I have loved playing with Lego's my entire life. Other people besides me love to play Lego's too. Many people would not agree with my plan, to build a Lego Animal Park. Their view might include that the forest is a beautiful place when left untouched. I almost agree with them.

Another view that might conflict with a Lego Animal Park is deforestation. Also, making something like a swimming pool or theme park would take a lot of concrete. You would need things like a steamroller and/or drills as well. For a pool you would need a lot of cars to transport the materials. That would take up a lot of gas and oil. It would also create a lot of exhaust, which would add to the green house effect, which would eventually burn a hole in the atmosphere. Some of the people here in Whale Pass might not like a lot of tourism that other projects being presented might bring.

My plan however will not take up a lot of concrete at all. Also you do not have to cut down many trees. It will also not take power that would require a generator shack. This Lego Animal Park project will only take a minimum amount of transportation, which will minimize the amount of exhaust going into the atmosphere.

So, I suggest you choose my plan so you can save time, money, and materials. Additionally you could get students from local schools to help build the Lego animals. My idea is fast, inexpensive, and fun.
