Lilla Leach hesitated, gazed at a red patch of flowers ahead and then ran to it. She got down on her knees, and exclaimed, "I have never seen anything like it before! Isn't it beautiful? I believe it is new."

Visually resembling a small rhododendron, this unique shrub is a relic of the pre-ice age and one of the oldest members of the Ericaceae Family.

Wilderness Resource

Wilderness is an area which is affected primarily by the forces of nature, where humans are visitors who do not remain. It may contain ecological, geographical or other features of scientific, educational or historic value!

Botanical Values

The Kalmiopsis Wilderness is legendary for its diversity of plant life! Much of this diversity results from plant species adapting to life in harsh soils derived from peridotite and serpentinite rocks. Both are rich in heavy metals such as magnesium, iron, chromium and nickel, which in high amounts can be toxic to most plants. The diversity of plant habitat has been the result of geologic forces (uplift, folding and faulting), erosional and depositional forces (glaciations, weather, climate and the action of rivers), and periodic fires. Within the Kalmiopsis Wilderness are portions of the Babyfoot Lake, York Creek, and Big Craiggies Botanical Areas.

The following Preliminary Plant List is intended to be used as a beginning botanical checklist for your observations. It is certainly not complete and we encourage you to report to the Forest Service your botanical observations, both common and rare, which have not been included on this list. Plants are listed alphabetically by scientific name to encourage you to become more familiar with the nomenclature. For assistance in plant identification please refer to the list of suggested references.

References: Refer to these abbreviations for Habitat and Status
(note: These designations are meant as a general guide.)

HABITAT:
D = Dry/Rocky S = Serpentine/Peridotite F = Forest
R = Riparian/Moist OW = Open Woods M = Meadow

STATUS:
** = Species Considered “**Sensitive**” (population viability a concern)
* = **Monitor/Watch** – species may be declining

NOTE: Please provide us with information on species which are classified as **Sensitive**, or **Monitor/Watch**, or are not currently listed here.

•The names used in this booklet are based primarily on the online version of the second edition of *The Jepson Manual*, also on the USDA Plants website. Name changes since the 12/97 update of the Plant List are marked with a °.
