

## **INSTRUCTIONS**

- 1/ A PLAN OF OPERATION must be prepared and filed by purchasers for sales of two years or more in duration within 60 days after final award of contract.
- 2/ An operating season can be a full or partial season depending on sale beginning and terminating dates.
- 3/ Planned Cumulative Volume Removed is the minimum volume by % of total volume on a sale the purchaser intends to remove by operating season. Example would be if purchaser plans to remove 25% each operating season on a four operating season sale. Purchaser would enter 25% in first season, 50% in second season, 75% in third season, and 100% fourth or final season. In the case above, if the purchaser removed 50% of total sale volume the first season, he would have met his obligation for removal through the second season.
- 4/ “Beginning and subsequent construction season” is the operating season he begins construction and subsequent seasons he intends to be constructing the road or bridge.
- 5/ Completion date is the date established in the contract for sales with specified roads and bridges over \$20,000.00. Specified roads less than \$20,000.00, purchaser will establish completion date with Forest Service concurrence.
- 6/ Erosion prevention is the **timing** of erosion prevention work when **critical** for protection of resources. Example could be when waterbars are to be constructed – during temporary road constructions, prior to closure of block, or before the end of operating season.
- 7/ Slash Disposal is the **timing** of slash disposal when it is **critical** for fire prevention or other resource protection.
- 8/ Should be used only in an **unusual situation**. Once example might be for SBA sales when a small business must identify where they intend to market sawtimber.
- 9/ Use the remarks to expand on item 2 through 7 if necessary.
