

Get to know your National Forests in Florida

Apalachicola | Ocala | Osceola

www.fs.usda.gov/florida

• Discover Florida's forests

The National Forests in Florida includes three forests—the Apalachicola, Ocala, and Osceola. Combined, these national forest lands span almost 1.2 million acres in north and central Florida. The National Forests in Florida also manages the 1,000-mile Florida National Scenic Trail, which is one of 11 national scenic trails in the United States.

• When were the forests established?

In 1908, President Theodore Roosevelt officially proclaimed the Ocala National Forest. At 386,996 acres, it's the oldest national forest in Florida.

The Osceola National Forest was created by a Presidential Proclamation in July 1931 due to the land being heavily cutover and burned. At 236,775 acres, this “flatwoods” forest is comprised of low pine ridges separated by cypress and bay swamps. Currently, the Osceola is expanding its connection to the Okefenokee National Wildlife Refuge through land acquisition in the Pinhook purchase unit.

The Apalachicola National Forest, established in 1936, is the largest national forest in Florida at 573,521 acres. Located in the Florida Panhandle, the Apalachicola is one of the most biodiverse forests in the country.

• Who visits the National Forests in Florida?

With large urban population centers of Jacksonville, Orlando, Daytona, Tampa and Tallahassee within close proximity, the forests' average annual visitation is 1.1 million people.

• What wildlife makes its home in Florida's forests?

The Apalachicola is home to the largest recovered population of endangered red-cockaded woodpeckers in the world. The Ocala is the only National Forest the threatened Florida scrub-jay calls home and supports over one-quarter of all scrub-jays in the world. With diverse bird populations and growing Florida black bear populations, the forests are ideal locations for bird watchers and nature lovers alike.

• What type of recreation is available?

From primitive wilderness to off-highway vehicle (OHV) riding, the National Forests in Florida has a variety of recreation opportunities. The forests offer a range of accommodations from full-hookup campgrounds to rustic hunting and boating camps. About 190 miles of the Florida National Scenic Trail (FNST) traverses the forests, giving visitors a chance to enjoy Florida's natural environment while walking, hiking or wildlife viewing. All three National Forests in Florida offer exceptional hunting and fishing recreational opportunities.

• What are some highlights from our forests?

The Ocala boasts pristine springs, perfect for snorkeling and swimming, and is home to the remaining vestiges of the imperiled sand pine scrub ecosystem. The Apalachicola's fragile savannahs are open wet, grassy areas that provide refuge for an unusual combination of grasses, delicate orchids and carnivorous pitcher plants. The forested woodlands and swamps of the Osceola are remnants of a less-developed Florida.

National Forests in Florida: Forest Facts and Figures

General Forest Facts

1.2 million acres of managed land
 \$22.5 million average annual budget
 182 employees

Recreation

1.1 million visitors annually
 118 developed recreation sites

Acres

	Apalachicola	Ocala	Osceola	Total
General Acres	573,521	386,996	236,775	1,197,292
Wilderness Acres	38,317	28,736	18,608	85,661

(Wilderness includes all congressionally designated areas)

Water

600 billion gallons of water produced
 36,000 acres of lakes, rivers and ponds
 510,000 acres of wetlands
 854 miles of perennial rivers and streams

Cultural Resources

55 historic structures
 3,742 archeological sites
 1 National Historic Landmark
 Olustee Battlefield
 (National Register listed Civil War site)
