

**File Code:** 2210; 2230  
**Date:** March 3, 2020

Richard Youngker  
55 Ranch, L.L.C.  
3050 North Western Circle  
Buckeye, Arizona 85396

Dear Mr. Youngker;

This document serves as your summer 2020 Annual Operating Instructions for the Double A and Corva Allotments.

**I. AUTHORIZED LIVESTOCK NUMBERS / PERIOD OF USE**

Your 2020 Authorized Use Request has been approved and you are authorized the following Livestock Numbers and Periods of Use:

<u>Corva:</u>	244 Cattle (Cow / Calf)	March 1, 2020 to February 28, 2021
<u>Corva:</u>	6 Horses (Saddle)	March 1, 2020 to August 28, 2020
<u>Double A:</u>	244 Cattle (Cow / Calf)	September 1, 2020 to February 28, 2021

The 2020 authorized livestock numbers and the authorized period of use were determined based on past stocking rates and allotment inspections from seasons on the Corva and Double A Allotments.

Any changes to the 2020 authorized livestock numbers will require that you file an additional Authorized Use Request. The District will need a minimum of 45 days prior to assess resource conditions and process a supplemental grazing bill of necessary for additional livestock. Please contact your Rangeland Management Specialist Cherie Owens prior to making any decisions regarding increased livestock numbers.

**II. GRAZING SCHEDULE**

The following is the planned grazing sequence for the 2020 grazing period. The pasture move dates shown are an estimate and may need to be amended based on actual conditions.

Corva:

Pasture	Planned Graze Period	Number of Head
Bridge	06/01 – 06/07	244
Middle / Corva / Tinhouse	06/08 – 07/08	244
Orr Pastures	07/09 – 08/17	244
Broken / Supai	08/18 – 09/30	244
Bridge	10/01 – 10/13	244
Road / House	10/14 – 10/31	244

Changes from the grazing schedule will be made only with Forest Service approval. The planned use period in a pasture may be shortened or lengthened depending on forage availability and utilization in key areas. Livestock pasture moves will be completed within a ten (10) day period and livestock will be actively herded from one pasture to another. It is imperative that once a pasture move occurs, the livestock remain within the designated pasture. For various reasons (i.e. pasture gates left open, cattleguards not maintained, cut fences, etc.), cattle may stray from the designated pasture. Preventing livestock from grazing adjacent allotments or your allotment's rested pastures is your responsibility.

### **III. DROUGHT MANAGEMENT**

Drought is an inevitable occurrence in the southwestern United States. Both the Forest Service and grazing permittees must plan for drought as a normal part of management. During periods of drought, the following management actions may be necessary:

1. Stocking levels may need to be reduced. Reductions may be necessary prior to the permitted season of use and/or during the permitted season of use.
2. Season of use may need to be shortened. Depending on the severity of the drought and the stocking level, a reduced grazing season may be necessary.
3. Pasture use periods may need to be shortened. Pastures will not be re-grazed during the same grazing season and this may ultimately result in an early exit from the allotment.
4. Utilization and/or seasonal utilization (grazing intensity) standards may need to be reduced. Depending on the severity of the drought and the stocking level, reduced utilization standards will likely result in shortened pasture use periods and may ultimately result in an early exit from the allotment.
5. Lack of livestock water, or poor distribution of livestock water, may result in reduced pasture/allotment use periods. Depending on forage conditions, this effect may be mitigated by hauling water to temporary livestock watering facilities.
6. Allotment Management Plan direction for pastures requiring rest or deferment will be followed. Livestock use of planned rested pastures due to drought will not be authorized.

Allotment Management Plan direction for pastures requiring rest or deferment will be followed. Livestock use of planned rested pastures due to drought will not be authorized.

#### **IV. GRAZING STRATEGY**

Graze livestock in a deferred, rest-rotation grazing system for the summer grazing period. The management of livestock pasture moves in this allotment will continue to be based upon seasonal utilization guidelines and allowable forage utilization standards.

#### **V. ALLOWABLE UTILIZATION STANDARDS**

Utilization is the proportion or degree of the current's year's forage production that is consumed or destroyed by animals (including insects). It is a comparison of the amount of herbage left compared with the amount of herbage produced during the year. Utilization is measured at the end of the growing season when the total amount of herbage produced during the year. Utilization is measured at the end of the growing season when the total annual production can be accounted for and the effects of grazing in the whole management unit be assessed. Utilization guidelines are intended to indicate a level of use or desired stocking rate to be achieved over a period of years.

In accordance with the Decision Notice signed on September 9, 2009, the allowable use level set for the Corva / Double A Allotments will be a conservative use of 40%.

#### **VI. SEASONAL UTILIZATION**

Seasonal utilization is defined as the amount of herbage removed through grazing or trampling during the grazing period. Seasonal utilization will be measured at the end of each pasture's livestock grazing period. The seasonal utilization guideline will be the primary factor in determining when livestock need to move to the next pasture; but other factors such as climatic conditions, opportunity for plant growth, and previous year's utilization level will also be considered. Annual reductions in the seasonal utilization guideline may be made based on resource conditions.

Monitoring will be conducted within two weeks before or after livestock leave a scheduled pasture. Seasonal utilization leaves will be approximately 21-40 percent. If utilization levels within portions of a scheduled pasture approach allowable use, you are required to move livestock into areas not approaching allowable use. If cattle cannot be effectively managed away from areas within the pasture that have met allowable use or if utilization objectives are met throughout the pasture prior to scheduled rotation, contact District Range personnel. Cattle will be moved into the next available pasture within the annual rotation. In the event that forage utilization objectives are met in all available pastures, livestock will be removed from the allotment. Management adjustments will be made to the following years Annual Operating Instructions to avoid recurring situations.

## VII. RESOURCE MONITORING

### Forage Utilization

Forage utilization within each pasture will be monitored and the allowable utilization standards (section V) and the seasonal utilization guidelines (section VI) will be enforced. This may result in earlier pasture moves than indicated in the Grazing Schedule (section II).

Forage utilization monitoring will occur at locations within pastures using the “key area” concept. Key areas are defined as “...a portion of range, which because of its location, grazing or browsing value, and/or use, serve as an indicative sample of range conditions, trend, or degree of use seasonally. A key area guides the general management of the entire area of which it is a part.” Key areas will generally have the following characteristics: they will be approximately 20 to 500 acres in size; they will be located on productive soils with slopes less than 15%; they will have a plant community that is representative of the larger area; and they will generally be located 0.25 to 1.0 miles away from livestock water sources.

Forage utilization monitoring and its specific application to your allotment should be discussed with your Rangeland Management Specialist. Your participation in utilization monitoring is encouraged.

### Producer Monitoring

You will monitor and document the following items on the enclosed Actual Use and Forage Utilization Monitoring Form: 1) Actual Grazing Period; 2) Actual Livestock Numbers; and 3) Average Utilization of all forage species at two different time periods: Just prior to livestock entering the pasture, and immediately after livestock leave the pasture. **It is very important that this monitoring be completed during the time frames specified, and that the Forage Utilization Monitoring Form is submitted to your Rangeland Management Specialist Cherie Owens at the end of the 2020 grazing period.**

## VIII. RANGE IMPROVEMENTS

You must contact Rangeland Management Specialist Cherie Owens at least 45 prior for work to begin to obtain necessary clearances and a letter of authorization.

1. Constructed of New Structural Range Improvements  
There are no new structural range improvements scheduled for your allotment this year.
2. Removal of Structural Range Improvements  
There are no structural range improvements scheduled for removal this year.
3. Existing Structural Range Improvements
  - a) General maintenance of Structural Range Improvements as needed.
  - b) Clean the following dirt tanks: Section 2 Tank (007860) and SCS Tank (007861).  
You must contact Range Specialist Cherie Owens and Archeologist Neil Weintraub

(928-635-5647) for required clearances at least two weeks in advance of when you would like to begin work.

Please contact Rangeland Management Specialist Cherie Owens once maintenance of individual structural range improvements is complete in order for her to conduct an inspection.

## **IX. SALTING AND PROTIEN BLOCK PRACTICES**

### Salting and Protein Blocks

Proper salt and protein block location can be a good tool to aid in livestock distribution. They will be used in a manner to spread livestock utilization throughout the pasture. The following guidelines will be used when placing salt and protein blocks:

1. In general, salt and protein blocks should not be placed within ¼ mile of water. Locate salt/protein blocks where forage is abundant and utilized less than average.
2. Salt and protein blocks will not be placed in areas of depleted range, erosive soils, or sensitive plant or animal species. Areas of sensitive plant or animal species will be identified by your Rangeland Management Specialist Cherie Owens and included in each year's AOI
3. Limit supplement types to non-emergency feeds such as salt, protein, and mineral blocks. No more than three blocks (50 lb. blocks) of salt/protein will be placed at any location at any one time.
4. Salt/protein will not be placed at the same location twice during the same grazing season.
5. The use of portable salt/protein block containers is encouraged but not mandatory.

### Supplementing with Hay:

Supplementing with hay may be approved for use on Forest allotments provided it is used as a deficiency supplement during sustained unusual heavy snow/ice events. It will only be allowed for a specific location and time under the discretion of the District Ranger. Only certified weed-free hay may be authorized to prevent the spread of noxious weeds.

Supplemental feeding will not be used in place of forage if forage runs low within a pasture.

This direction is to supersede past Annual Operating Instructions as a Best Management Practice (BMP) unless differing instructions are specifically noted within an allotment NEPA decision.

## **X. PORTABLE WATER HAULING**

Temporary sites for portable haul water may be needed and should be used as necessary to assist in livestock distribution. The following requirements will apply to portable haul water locations:

1. Coordinate with the District Rangeland Management Specialist to identify portable water haul locations for individual pastures prior to the grazing period.
2. To aid in livestock distribution, the portable water haul locations should generally be in areas of light forage utilization.
3. Portable water hauls will not be located in areas of depleted range, erosive soils, or sensitive plant or animal species.
4. Portable water haul locations will be moved when the desired forage utilization levels have been reached.
5. Portable haul water storage tanks and troughs will be removed when livestock leave the pasture.

## **XI. FIRE**

Please use caution during all ranch activities that could potentially start a fire. All ranch vehicles must be equipped with an axe, shovel, and water bucket. All open camp and branding fires require a ten-foot fire ring cleared down to mineral soil.

During periods of critical fire danger, the Forest Supervisor may declare a Red Flag Alert or issue other special orders. Under these conditions, the building or use of fires, the use of power saws, heavy equipment, ATVs and other motorized equipment may be prohibited on Forest Service land. All Federal, State and Local fire restrictions and regulations must be observed.

Report all fires to the *Williams Ranger District Office at (928) 635-5600* or to the *Kaibab National Forest Supervisors Office at (928) 635-8200*.

Cooperation in the reporting, prevention, and suppression of fires will be expected as specified in Part 2, section 10 of your Term Grazing Permit.

## **XII. MOTOR VEHICLE USE/ RESTRICTIONS**

On July 9, 2010, the Kaibab National Forest began implementation of the Travel Management Rule. The Travel Management Rule requires the designation of roads, trails, and areas open to motor vehicle use and these routes are identified on the Motor Vehicle Use Map. Implementation of the Travel Management Rule requires active management of all motorized use, including use related to permitted grazing activities. Motorized travel off the designated road system, including off-road access, by grazing permit holders will be based on the need to carry out required management practices necessary to comply with the terms and conditions of the Term Grazing Permit. Examples of required management practices include but are not limited to: the repair and maintenance of structural range improvements;

transport and placement of mineral and protein supplement; herding of livestock; and tending to sick or injured animals. Legitimate motorized use off the designated road system, including off-road access, for conducting activities required under the Term Grazing Permit will be authorized as follows:

1. **For motorized use with ATVs, UTVs, motorcycles, and full-size pickup or smaller vehicles (curb weight less than 8,000 pounds):** Grazing permittee must obtain a grazing allotment specific Restricted Road, Trail and Off-Road Administrative Use Permit. Motorized vehicle use off the designated road system will be limited to only that use which is necessary for compliance with the terms and conditions of the Term Grazing Permit.
2. **For motorized use with larger vehicles (curb weight greater than 8,000 pounds or larger than a full-size pickup) or any heavy equipment:** Grazing permittee must obtain a site-specific Restricted Road, Trail and Off-Road Administrative Use Permit. Motorized vehicle use off the designated road system will be limited to only that use which is necessary for compliance with the terms and conditions of the Term Grazing Permit.
3. **To request site specific Restricted Road, Trail and Off-Road Administrative Use Permit,** the grazing permittee must provide their Rangeland Management Specialist with the project details a minimum of 30 days prior to the proposed starting date for the permit.
4. A copy of the approved Restricted Road, Trail and Off-Road Administrative Use Permit must be with the vehicle operator while operating the vehicle off the designated road system.
5. A Permit Placard must be attached to all permitted vehicles while operating off the designated road system.
6. Off-Highway vehicles (ATVs, UTVs, and motorcycles) used for conducting activities required under the Term Grazing Permit must be licensed and permitted in accordance with Arizona State law.
7. The Motor Vehicle Use Map for the Kaibab National Forest identifies certain roads as “Roads Open to Highway Legal Vehicles Only”. These roads are open only to motor vehicles licensed under State law for general operation on all public roads within the state. Grazing permittees operating motor vehicles on these roads must comply with the legal requirements. Operating a motor vehicle off the designated road system to avoid the legal requirements of “Roads Open to Highway Legal Vehicles Only” is not permitted.

8. Grazing permittees will utilize motorized vehicles off the designated road system in a manner that will not result in damage to soil, watershed, vegetation, wildlife, heritage, or other forest resources.
9. Failure to comply with the conditions of the Restricted Road, Trail and Off-Road Administrative Use Permit may result in the immediate cancellation of the Restricted Road, Trail and Off-Road Administrative Use Permit and may result in the issuance of a Notice of Non-Compliance for violation of the terms and conditions of your Term Grazing Permit.
10. Grazing permittees that do not obtain a Restricted Road, Trail and Off-Road Administrative Use Permit are required to operate motorized vehicles only on the designated road system. Operation of a motorized vehicle off the designated road system without a valid Restricted Road, Trail and Off-Road Administrative Use Permit will result in the immediate issuance of a Notice of Non-Compliance for violating the terms and conditions of your Term Grazing Permit (Part 2, Section 8a). A Notice of Non-Compliance may result in Term Grazing Permit suspension or cancellation proceedings.

### **XIII. PERMETTEE REVIEW**

On February 27, 2020 Cherie Owens met with the producer Richard Youngker and ranch manager, Benny Aja to develop and discuss the 2020 Summer Annual Operating Instructions for the Double A and Corva Allotments. The ranch manager has reviewed and agreed with these instructions.

If you have any questions or concerns, contact Rangeland Management Specialist Cherie Owens at (928) 635-5621.

Sincerely,

*/s/Debra Mollet*
