PRESCRIBED BURNING PLANNED ON THE SALMON RIVER RANGER DISTRICT

The Salmon River Ranger District will be utilizing prescribed fire to meet ecosystem management objectives in the Blue Mountain / Squaw Creek, Kessler Creek, and Slate Creek drainages this year. The prescribed burning will take place this fall when weather and environmental conditions are favorable to meet resource objectives.

The prescribed burning will treat natural and activity fuels to meet resource objectives. The prescribed burning is designed to improve habitat for wildlife, reduce the natural fuel accumulations, enhance forest health, and re-introduce fire into a fire dependant ecosystem. Activity fuels will be treated to reduce fuel accumulations derived from timber harvest.

A total of approximately 2000-5000 acres could be treated with prescribed fire. This activity is weather dependant and may occur as early as August 28.

The prescribed burning will utilize hand ignition in conjunction with aerial ignition. The aerial ignition will be ignited using a helicopter and a “Primo Mark III” plastic sphere dispenser.

Individuals requesting additional information concerning this project may contact Kevin Chaffee or Andrew Lane – Fire Management personnel on the Salmon River Ranger District at (208) 839-2211.
