

TENTATIVE 10 YEAR TIMBER SALE ACTION PLAN

Table B-1 shows the tentative timber sale program for the first six years of the Plan. This program is based on current information and may be revised as watershed analysis and other planning efforts are completed in the next few years. This proposed program is also subject to change based on the funding received for sale preparation. All sales are within Matrix or Hayfork Adaptive Management Area lands.

Each year's program includes an estimated amount for small sales. The amount of small sales occurring on

the Forest can fluctuate considerably from year to year depending on site-specific conditions and management area goals and objectives.

Total volume harvested during the ten-year Plan period is 155 MMBF. Specific details of exact sale areas, volume to be harvested, and road construction are estimated. Project planning including NEPA analysis and documentation will follow watershed analysis and will update the following proposed schedule of sales.
