

**Appendix E**  
***Post-Fire Vegetative Re-Growth in Riparian Areas***  
***Photographs***

**Figure 1: Post-fire photos, taken November 2007, of the same intermittent stream above Road 29N46, within project unit 11b, in the Moonlight Creek watershed.**

**Figure 2: Post-fire photo, taken June 2009, of the same intermittent stream in Figure 1. The downed log across the channel and metal culvert inlet section provide reference points. Post-fire riparian vegetation re-growth is robust and provides an effective buffer for erosion from adjacent project slopes.**
