

● Golinsky Mine

## SHASTA-TRINITY NATIONAL FOREST

American Recovery and Reinvestment Act (ARRA) Accomplishments

### **Golinsky Mine**

One of several historic underground copper mines in Shasta County. The project was successful to create a passive water treatment system (PWTS) and reduce acid mine drainage into Lake Shasta. Contaminated water is being piped into a 120'x80' earthen treatment cell filled with organic material. The resulting chemical process reduces the water's acidity to improve watershed health, benefiting public safety and natural resources.
