PERMIT INFORMATION

Permitted Numbers	Season of Use
	6116 to 9115
Number of livestock authorized to graze this year.	
10 head of cow/calf pairs	6/16 to 9/15

Grazing Rotation

Unit # 1 Point-to-Wright Pasture

June 16 to July 31

Unit # 2 Wright Creek

August 1 to September 15

This allotment is managed under a two pasture system. Springs located on the Point-to-Wright Pasture are critically depended on average to above average snow levels. The Point-to-Wright Pasture (unit #1- north end) will be grazed first from June 16 to July 31; then the Wright Creek Pasture (unit #2 - south end) will be grazed second from August 1 to September 15.

COMPLIANCE

This AOI is a yearly agreement that is part of your Term Grazing Permit consistent with Part 1, item 3 and Part 2, Item 8 (a). It is a working document, and situations may develop during the grazing season which requires changes to these instructions. If this becomes necessary, or if you cannot comply with some part of these instructions, contact the District Ranger and obtain approval before initiating changes or deviating from these instructions.

GRAZING STANDARDS

The Revised Targhee Forest Plan Standards are as follows:

1. Within the Aquatic Influence Zone (AIZ):
 - a. At least four inches of stubble must remain along the hydric greenline (HGL) at the end of the grazing period. The HGL is the first permanent vegetation next to the waters edge.
 - b. Away from the HGL, at least three inches of stubble will be left on the key riparian species at the end of the grazing period.
2. No more than 35 percent use of the current year's growth is allowed on the woody riparian vegetation (i.e., willows)
3. Allowable use on grasses and forbs in the uplands is 45 percent (dry weight); on upland shrubs (i.e., mountain mahogany) it is 35 percent of the current year's growth.

Once these use rates are reached the cattle will have to be moved to the next unit or they may be required to leave the Forest prior to the end of the grazing season. As you know this can be a concern due to the possibility of a below normal moisture summer ahead. Please consider how you may be able to accommodate your livestock on alternate feed sources if they are required to leave the Forest Prior to the end of the grazing season.

RANGE IMPROVEMENTS

Fences and water developments will be maintained prior to cattle entering the allotment. The cattle access trails that were constructed through thick stands of brush and trees should be maintained to ensure cattle may utilize available forage in the uplands to lessen the use in the riparian areas. The South Fork Pony Creek Trough (#5022) was replaced and a short section of the Crooked Creek Fence (#5018) was reconstructed in 2014.

The permittee is responsible for all fences and range improvements on the Point-to-Wright Allotment. We would like to review the allotment with you this summer to assess the needs of range improvements and overall management of the allotment. The authorized officer will contact you with a meeting date.

We appreciate your cooperation in helping in the control of noxious weeds. Remember, all livestock feed or straw brought on to the forest has to be certified weed free. We will be treating weeds again this season. Plumeless thistle a new species to that area is now being treated on the

Point-to-Wright Allotment. Please report to us any new weed patches we have not been treating in the past.

MOTORIZED ACCESS

The Revised Targhee Forest Plan restricts motorized travel to designated routes only. For administrative purposes, grazing permittee(s) will be issued a permit to travel cross-country to maintain facilities for up to two vehicles per week. This permit should be adequate to allow you to repair water troughs, fences, and other range improvements identified in your Term Grazing Permit on pages 6-8. For projects that will require the permittee to travel off designated routes more than two times per week an additional permit will be required. **Remember,** anywhere you drive the public will follow.

ALLOTMENT MANAGEMENT

Good herding practices and wise salt placement will be needed to avoid over use of the riparian areas.

Utilize side canyons and bench areas as much as possible. Working for uniform livestock use will allow you to stay longer on each unit. Don't graze cattle in plantations and clearcuts until trees are 3- feet tall.

State laws require all non-virgin bulls that are running on public lands to be trichomoniasis tested and tagged.

Stocks outside the permitted season or permitted area are considered excess livestock. When excess livestock are identified as belonging to a permittee; the permittee will be billed at the unauthorized use rate and permit action may be taken.

Wolf Management

You need to comply with the most current rules concerning wolf management. To receive the latest information on wolf management you can the Idaho Department of Fish and Game. Any problems with wolves will be reported to Wildlife Services as well as Teton Basin Ranger District as soon as possible .

RECORD KEEPING

Included in your folder is a page of general grazing instructions, an allotment map, and an Actual Use Record. Please fill out the record and return it and the folder to us at the end of the grazing season. We appreciate your cooperation in the past of writing your comments on the Actual Use Record. The comments are valuable to help us improve range management of the allotment.

I would like to thank-you, for coming in and discussing your concern about the allotment this spring. If you have any questions please contact, me or Matt Hoggan, Rangeland Specialist, at (208)-354-6625 desk or cell (208) 313-7915 winter office is (208) 542-5809.
