

**ANNUAL OPERATING INSTRUCTIONS
INCHAUSPE (BLM) AND TREPASS CREEK (FS)
2014 GRAZING SCHEDULE**

TOTAL CATTLE AUTHORIZED:

73 HEAD (BLM) 6/16 TO 9/30

32 HEAD (E/U) 6/16 TO 9/30

88 HEAD (FS) 6/16 TO 9/30

193 Total head including bulls.

USE AREAS AND DATES (SEE ATTACHED MAP)

SPRING USE PASTURE: Lower DRY FORK 6/16 TO 8/13

FALL USE PASTURE: Upper DRY FORK 8/14 TO 9/30

Cattle will be turned out and distributed in the LOWER Dry Fork Drainage within the boundaries outlined on the attached map. Cattle will be held in the LOWER part of the Dry Fork until no later than August 13 and then will be moved into the UPPER part of the Dry Fork drainage area.

The above listed dates are approximate. Dates may be changed if the Forest Service and/or the BLM determine utilization along creek bottoms is in excess of utilization levels or stubble heights as listed below.

The Inchauspe Draft Allotment Management Plan (page 10) set standards that when the stubble height of key riparian species reaches 4-6 inches along the greenline after July 15 and before August 10, livestock should either be moved to other parts of the pasture or moved into the fall use pasture. When greenlines in the fall use pasture are identified at 4-6 inches, cattle are to be moved to another area in the fall use pasture or taken off of the allotment.

Proper utilization is 50% in upland forage areas. A 4-6 inch stubble height of riparian forage species (i.e. sedges and wiregrass) shall be left along the greenline. You are responsible for proper utilization of the forage of your cattle. If inspections reveal areas of over utilization or riparian damage, corrective action will be expected (moving to the fall use pasture sooner or taking cattle home early) and action may be taken against your Forest Service and/or BLM permits.

Equal utilization of the range is the objective. This requires riding and salting be properly conducted throughout the grazing season. Rotate salting areas during the grazing season and from year to year. Place salt in good forage producing areas where the cattle do not go by preference. Use riding to appropriately 'place' cattle in these upland areas. Do not place salt next to water, roads, trails, aspen stands or in open meadows.

Cattle need to be kept in the appropriate pasture, properly distributed within that pasture, and moved timely based on the appropriate monitoring and the Plan.

Every effort must be taken to completely remove cattle off the allotment by the scheduled off date. For example, if it requires three days of riding to gather cattle, then start riding three days prior to the scheduled off date (or sooner if monitoring suggests that stubble height standards have been met).

Maintenance of all your improvements listed in Part 3 of your Forest Service term grazing permit must be done one week before your cattle enter the allotment and maintained to the standard they were constructed. Completing your maintenance responsibilities one week before your on date will allow the Forest Service time to inspect your improvements and address any concerns before your cattle enter the allotment. All labor and materials needed for maintenance are your responsibility.

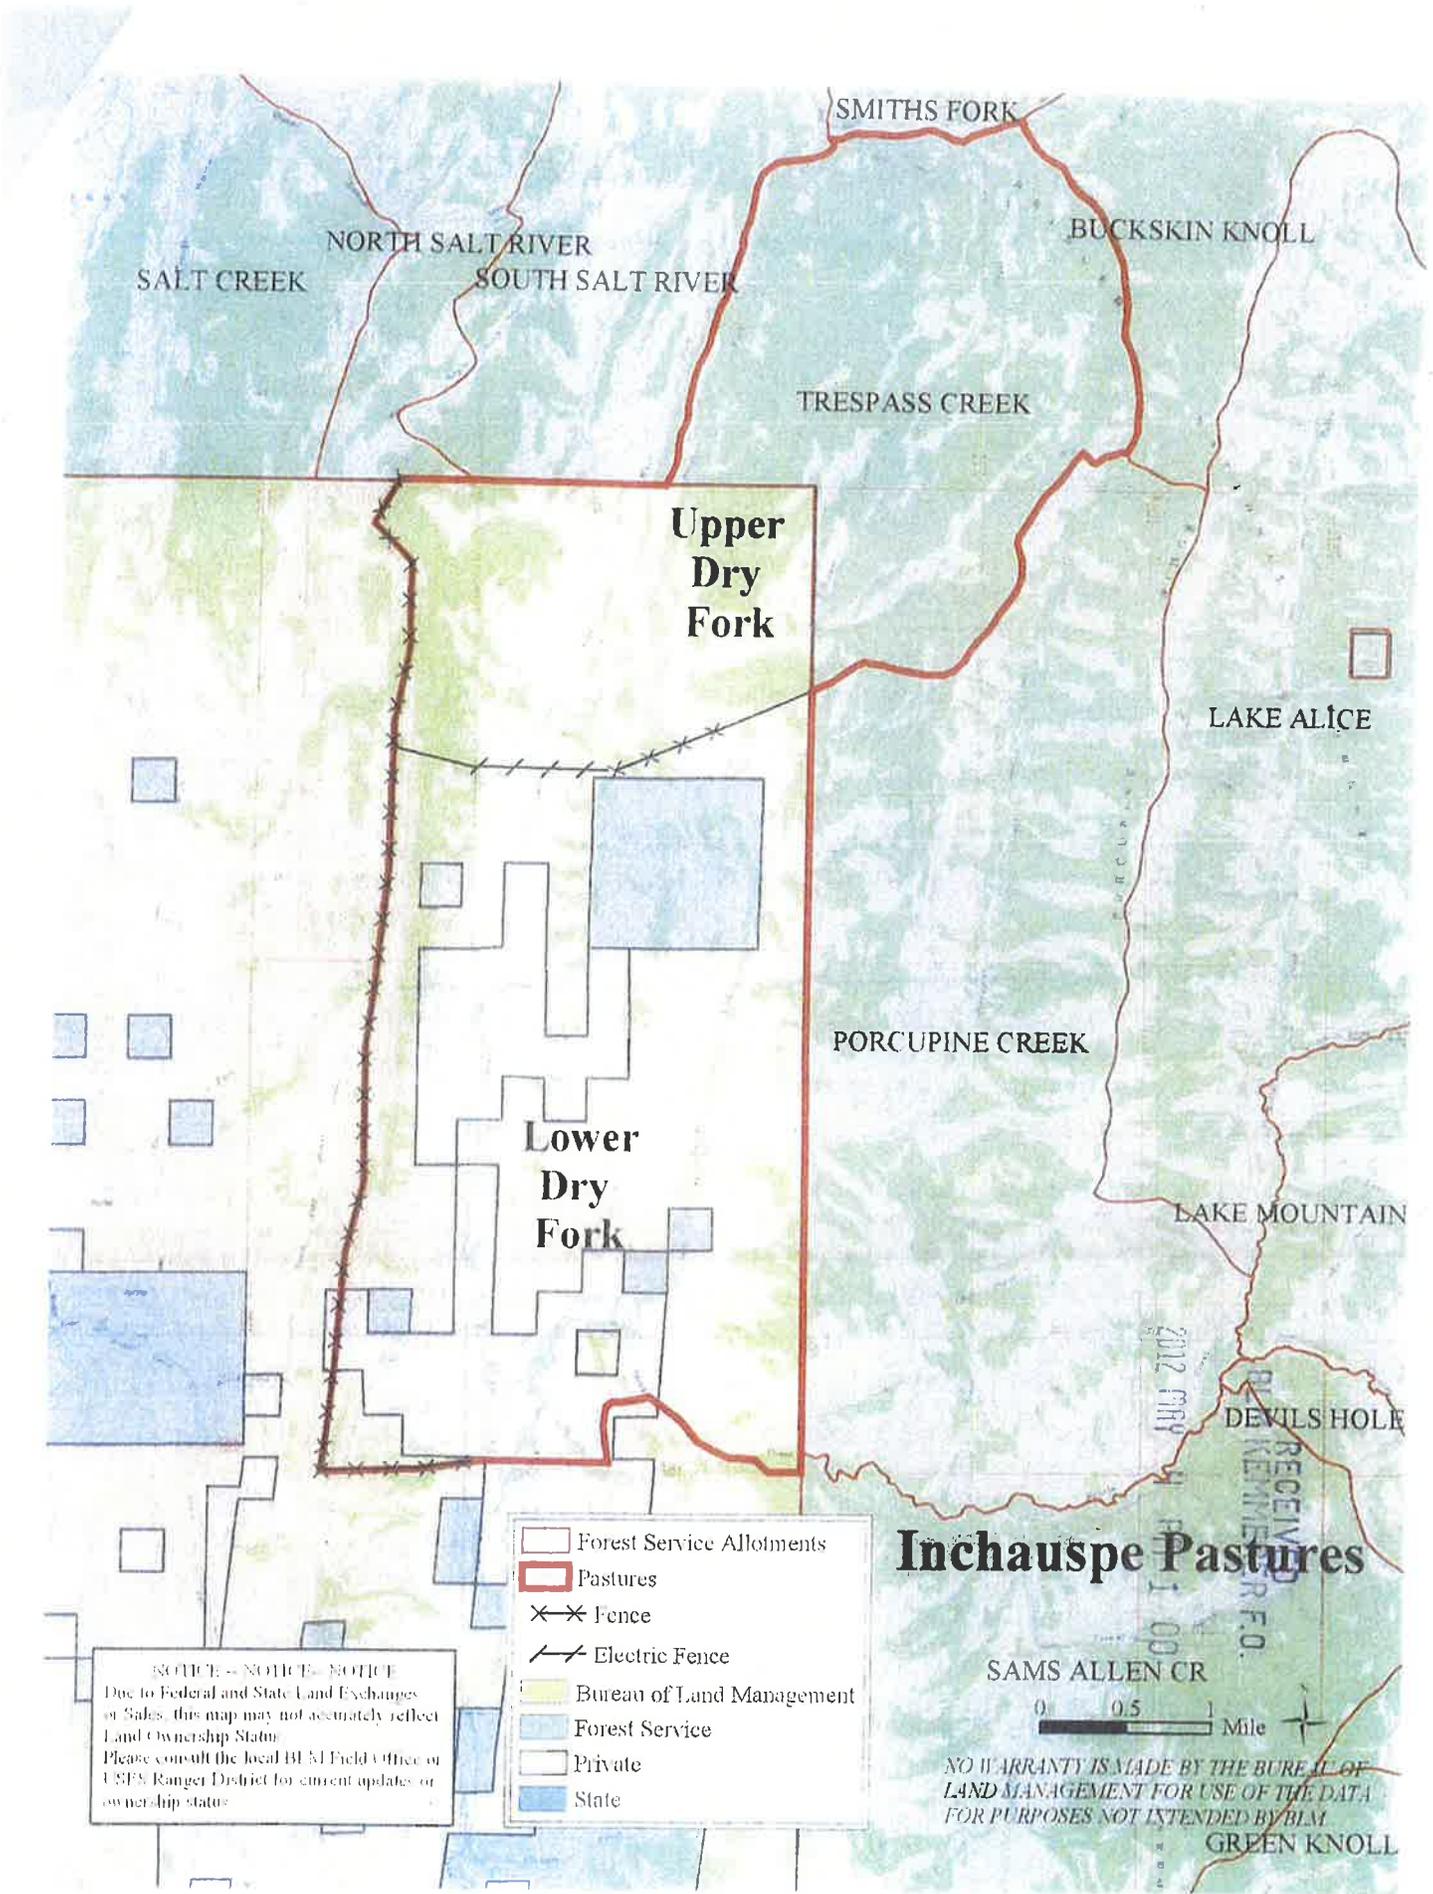

No cattle will be allowed back into the Spring Use Pasture once cattle are moved to the Fall Use Pasture.

The Larson's will control the cattle and keep the cattle in the correct pasture. Also, the Larson's will keep their cattle on the Inchauspe Allotment and avoid any use on the Smithsfork Allotment. The drift fence on Trespass Creek and the Dry Fork Allotment fence will be maintained.\
