

# 2014 Aerial Insect and Disease Survey

## USGS 100K Quad: BAKER - E144117; 8I

| Mortality Agents |                    |                |
|------------------|--------------------|----------------|
| Code             | Damaging Agent     | Primary Host   |
| 1                | Douglas-fir beetle | Douglas-fir    |
| 4                | Fir engraver       | True firs      |
| 6B               | Mtn. pine beetle   | Whitebark pine |
| 6L               | Mtn. pine beetle   | Lodgepole pine |
| 6P               | Mtn. pine beetle   | Ponderosa pine |
| 7                | Oregon pine Ips    | Ponderosa pine |
| 8                | W. pine beetle     | Ponderosa pine |

| Defoliators |                    |                |
|-------------|--------------------|----------------|
| Code        | Damaging Agent     | Primary Host   |
| 1           | Douglas-fir beetle | Douglas-fir    |
| 4           | Fir engraver       | True firs      |
| 6B          | Mtn. pine beetle   | Whitebark pine |
| 6L          | Mtn. pine beetle   | Lodgepole pine |
| 6P          | Mtn. pine beetle   | Ponderosa pine |
| 7           | Oregon pine Ips    | Ponderosa pine |
| 8           | W. pine beetle     | Ponderosa pine |

| Other Damaging Agents |                       |               |
|-----------------------|-----------------------|---------------|
| Code                  | Damaging Agent        | Primary Host  |
| AB                    | Balsam woolly adelgid | True firs     |
| HDA                   | Hardwood decline      | Quaking aspen |
| NF                    | Not flown             |               |

NOTE: Only the damage agents present in this quad are listed in this legend. The cause of damage is described by an alpha numeric symbol on the map and is followed by the number of trees affected; number of trees per acre (example: 5A); or the intensity of damage (L - Light, M - Moderate, H - Heavy).

USGS 100K Quad: BAKER - E144117; 8I  
2014 Aerial Insect and Disease Survey  
Map Scale: 1:100,000  
Date: 04 February 2015

### Legend

- Defoliating Agents
- Mortality Agents
- Other Damage
- Areas Not Flown During Overview Survey
- 2014 Large Fires

The basemap is an ESRI map service of TOPOI data (Copyright 2013 National Geographic) which is comprised of seamless, scanned images of USGS paper topographic maps. For more info on this map see [http://go.to.arcgisonline.com/maps/USA\\_Topo\\_Maps](http://go.to.arcgisonline.com/maps/USA_Topo_Maps).

A data dictionary, digital copies of this map and geospatial insect and disease data are available at: <http://www.fs.usda.gov/detail/forest-grasslandhealth/insects-diseases/>

### How the Aerial Surveys Are Conducted

Data represented on this map are based on trees visibly affected by forest insects and diseases detected and recorded during aerial survey flights conducted by the USDA Forest Service, the Washington Department of Natural Resources and the Oregon Department of Forestry. Observers have just a few seconds to recognize the color difference between healthy and damaged trees of different species; diagnose causal agents correctly; estimate intensity; delineate the extent of damage; and precisely record this information on a georeferenced, digital map. Air turbulence, cloud shadows, distance from aircraft, haze, smoke and observer experience can all affect the quality of the survey. These data summaries provide an estimate of conditions on the ground and may differ from estimates derived by other methods.

The aerial survey provides information on the current status for many causal agents and is important when examining insect activity trends by comparing historical and current survey data over large areas.

Overview surveys are a 'snap shot' in time and therefore may not be timed to accurately capture the true extent or severity of a particular disturbance activity. Specially designed surveys with modified flight patterns and timing may be conducted to more accurately delineate the extent and severity of a particular disturbance agent. Special surveys, such as Swiss needle cast surveys, are conducted when resources are available to address situations of sufficient economic, political or environmental importance.

**DISCLAIMER**  
Forest Health Protection (FHP), Washington Department of Natural Resources (WDNR) and Oregon Department of Forestry (ODF) strive to maintain an accurate Aerial Detection Survey (ADS) Dataset, but due to the conditions under which the data are collected, FHP, WDNR and ODF shall not be held responsible for missing or inaccurate data. ADS are not intended to replace more specific information. An accuracy assessment has not been done for this dataset; however, ground checks are completed in accordance with local and national guidelines: <http://www.fs.fed.us/foresthealth/aviation/qualityassurance.shtml>. Maps and data may be updated without notice.
