**Map Title:**

**White Mountains Additions  
Potential Recommended Wilderness Area  
Inyo National Forest**

**Description:**

The map displays two potential recommended wilderness areas that would be additions to the existing White Mountains Wilderness.

The recommended boundary for the western addition encompasses the western portion of the Blanco Mountain inventoried roadless area within the White Mountains. The boundary uses a combination of the White Mountains Wilderness boundary, natural features, a County Road, and straight lines between locatable points to delineate the recommended area. The boundary is set back 200 feet from the County Road to be consistent with other wilderness boundary setbacks on the Forest

The northern boundary of the potential recommended area is formed by the south boundary of the White Mountains Wilderness. The eastern boundary uses a natural feature, the 9,000 ft. contour interval, which visitors could locate on a map, but would not be able to locate on the ground without use of GPS. The southern boundary and a portion of the western boundary are straight lines, which visitors could locate on a map and on the ground because the line is an offset from a utility corridor. The remainder of the western boundary is offset from Wyman County Road or a utility corridor adjacent to White Mountain Road.

The recommended boundary for the eastern addition encompasses a portion of the Boundary Peak inventoried roadless area within the White Mountains. The boundary uses a combination of the White Mountains Wilderness boundary, Inyo National Forest boundary, natural features, and offset from motorized trails to delineate the recommended area. The boundary is set back 75 feet from motorized trails to be consistent with other wilderness boundary setbacks on the Forest.

The northern boundary of the potential recommended area is formed by the south boundary of the White Mountains Wilderness. The eastern boundary is formed by the Inyo National Forest boundary. The southern boundary uses a natural feature, a prominent ridgeline, which visitors could locate on a map or on the ground. The western boundary uses an offset from the Dead Horse Meadow motorized trail (35E301) and one of its spurs (35E301D), which visitors could locate on a map and on the ground. The recommended boundary also includes one cherry stem, an area where the boundary skirts around an approximately .4 miles long section of motorized trail (35E301E) into Dead Horse Meadow.
