

# Helena - Lewis and Clark National Forest Forest Plan Revision Proposed Action Comment Form

Comments due March 31, 2017

When commenting on the Proposed Action, it is most helpful to be as specific as possible. Including the page number, paragraph, and/or component number will help the team better understand your issue/concern. Also, if you have scientific literature you would like us to consider, please note this. Below are a few hypothetical examples of specific comments:

*Pg.41, FW-OBJ-PRISK-01. Treating fewer acres to sustain or restore whitebark pine will have the same desired effect. See the article written by John Anonymous titled, "Less treatment, similar results for whitebark pine in the Rocky Mountains".*

*Pg.107, CA-DC-WL-01. There is excellent big game winter range in the SE portion of the mountain range, particularly in Noname Gulch. We live adjacent to the gulch and have seen elk use this area for many years during the winter. Please take this into consideration.*
