Your Name (Optional): Jack Imbriani

Record of Comments:

I am a mountain bike rider and George Washington National Forest is my favorite destination. We appreciate the privilege of riding there and wish to make things even better.

I would like continued access to the current bike trails and even more trail access in the future. I advocate the use of chain saws to keep the trails open. I live in North Carolina so I personally work on trails local to myself.

I recognize the need for wilderness areas but believe the current defined areas are sufficient. The Ramsey's Draft wilderness that is adjacent to the Shenandoah Mountain trail should be slightly redefined such that ~~bicycle~~ bicycles would be allowed there. Adam's Mountain might be a better spot for more wilderness land.

It would also be nice if current out-and-back trails were extended into loop trails to increase the experience.

Additional Information Needs for Future Meetings:

Thank you tons. I would like to attend the meetings but I live several hours away. If there were a way to comment electronically, that would be great.

Record of Comments:

There are several areas that deserve wilderness consideration. The first is Beech Lick Knob. This 17,000 acre area was somehow missed in the roadless evaluation. The area is a beautiful place with few conflicts with other users. There are stands of significant old growth. The Shenandoah Mt area deserves consider for protection with various designations. Specific wilderness designation include Skidmore Fork, Little River and Ramseys Draft additions. Granted these areas are heavily utilized by the mt. bike, hunting and horse communities but be that as it may. These areas deserve consideration for wilderness.

The Jerkemtight/Benson Run area should also be considered. On Jerkemtight if the boundary was placed on the Shenandoah Mt Trail and only the eastern slope was considered for Wilderness. It would eliminate some conflicts with user groups. Similarly, if the Shenandoah Mt trail was

Additional Information Needs for Future Meetings:

utilized as the boundary on Benson Run this again would eliminate some conflicts.

Finally, any area within the Cow Knob SBA should be considered unsuitable for wind.

Record of Comments:

Little Allegheny Roadless Area should be considered for Wilderness designation. There are no conflicts in this area. There are no system trails and there has been little or timber management since the mid eighties. This area could be expand just slightly to include the area up to Big Ridge Rd. this would add an extra 1000 or so acres to the proposal. A second area is Laurel Fork. If ever there was an area in Virginia worthy of wilderness designation this is the place. Granted there are many trails in the area it should be noted that many of these trails are not suitable for bikes.

Your Name (Optional): mark miller

Record of Comments:

There are several areas that deserve wilderness consideration. The first is an addition to the Rich Hole wilderness. The Mill mountain Roadless Area, adjacent to Rich Hole, should be added to the Rich Hole with a slight boundary adjustment utilizing the White Rocks Tower Trail to the Ridge and then south. All conflicts w/ mountain biking would be eliminated. A second area is the small addition to Rough mt. Oliver Mt. is a third candidate. If the Jackson Trail served as the boundary this would eliminate some issues with the Mt. bike community. Further the illegal jeep road could serve as a boundary or if tank trapped to prevent its use the rest of the entire area could be protected as wilderness.

The area around Douthat State Park should be designated as a NSA as it serves as the scenic backdrop for the park. Also, special consideration should be given to Shake Run Ridge and the large stand of old growth that was documented by DNH

If you want to tie your comment to a special place on the maps, please put a number on the map and reference the number in your comments below.

Your Name (Optional): Mark Miller

Record of Comments:

I would request that you consider wilderness designation for the following areas: Three Sisters, Adams Peak and Three additions to St. Marys Wilderness.

Three Sisters and Adams Peak are both roadless areas so a wilderness designation will not significantly impact timber. Three Sisters has two trails (The AT and Little Rocky Row). The second trail is an out & back that connects to the AT. It is not a high priority trail for Mt. bikers and mountain biking is prohibited on the AT. The roadless area excludes the Johns Hollow Trail. Only a short segment of the AT would be in the proposed wilderness (7 miles). This would also create a wilderness complex of significant size when the adjacent James River Face and Thunder Ridge are considered. Adams Peak is more problematic as the Whetstone Ridge Trail would be closed to mountain biking. This should not preclude it from being considered for Wilderness.

The CER includes one addition to St. Marys The Area encompassing Russell Rocks should also be considered for designation. Finally, Kelley mountain should be designated as a NSA.

Your Name (Optional): Mark Miller

Record of Comments:

I would like to have considered for wilderness the following 2 areas. Both of these areas are located in the Big Schloss Roadless areas. The first is Three High Heads. This area could encompass the roadless area boundary ~~or~~ including the Sulphur Springs trail. The boundary would then exclude the QDMA on the east slope of the mountain and the Brood Turkey management on the western slope. It would have minimal impact on mountain biking as only 1.5 miles of trail. The second area is Little Stony Creek. The area ~~would~~ would go from ridge top top ridge top excluding the trails on each ridge. The Sugar Creek Camp would also be excluded. Finally, by utilizing the Big Schloss Cutoff as a boundary. The area would impact only one trail (Little Stony Creek). The remainder of the Big Schloss Roadless Area should be protected as a WSA.

There is a proposed wind facility on Church Mountain. Any wind placement should take into

Additional Information Needs for Future Meetings:

Consideration access to existing power line infastructure, current forest conditions, existing road access and S&A. Church Mountain is current a forested ridge top with no road along the ridge. The placement of wind facilities on a site like this should be considered unsuitable for wind.

Over—

One other note on the proposed wilderness areas. Neither area would impact the Old Dominion Endurance Ride.

Your Name (Optional): Phil Cobb

Record of Comments:

Keep off road vehicles confined to specific areas as now shown on GW maps. ORV are incompatible with all wildlife except for deer. Expand active management of forests for grouse and bear. These are the main indicators (canaries in the mine) of biological health in the forest. Other main indicator is neotropical birds. Do not expand current off road areas. Increase grouse management areas in Churchville area. Also, in current old clearcut areas with thick growth, consider going in with a small bulldozer and trampling the growth. This will essentially start the clearcut tree/brush growth over without any major damage to the cuts. Keep wilderness areas about the same. We should stay on course with logging and burns. Great North Mtn. area is overused in some situations; do not allow or limit the bear & deer hunting action in this area.

Your Name (Optional): Mark Gatewood

Record of Comments:

Heard a lot of citizen comments about "forest health" and "healthy forests" Implied that "forest health" only comes about through human intervention. Therefore, by implication, our forests were unhealthy until about 1900 when forestry schools started turning out foresters.

Hope you will take a broader view of "forest health" To allow natural processes To procede in some areas such as wilderness, roadless areas.

Manage the "forest health" on lower, gentler slopes Let the high, steep areas Take care of themselves unless good science indicates need To manage for key wildlife or plant species

Your Name (Optional): Jennifer Johnson

Record of Comments:

I think our forests should be protected from all development. There is very little wilderness left on the east coast and intact forests mean more than me to getting some money for timber. I'm a hiker first and foremost and I want to use the national forest for that – not for vehicles, including bikes.

Protect the special things about Virginia – our clean air, clean water, biologically special places, and beautiful vistas.

The projects that the forest service proposes should be subject to environmental assessments.

Recreation could take over our forests if we let it.

Your Name (Optional): Mark Gatewood

Record of Comments:

I would like To see roadless (if not wilderness) designation between RT 33 and 250. Appalachian warblers need migration routes along ridge, and nesting areas. Example: Canada and Black-Throated Blue warblers on Shenandoah Mountain.

Logging and Timber management seem more appropriate on lower, less steep slopes.

Watershed protection is very important for future growth and development in Augusta Co. Roadless designation, protect our water quality.

Adopt the more stringent riparian buffer zone size.

Your Name (Optional): Rick Rhoades

Record of Comments:

I maintain an open mind at this point re windmills.

I am unconvinced at this point that "Wilderness" designation is valuable - vs the encumbrances it places on multiuse.

I would hope that the FS adds the apparently "ad hoc" Strickler Knob Trail to its official inventory.

I support Forest multi-use, however with severe limitations to road building and vehicle use. (incl ATV's)

Record of Comments:

More timber harvest.

Timber Age Class keep increasing faster than harvest can occur.

Cutting timber specific to the industry,

- if cutting grade timber, cut grade
- not mixing good timber with low grade timber.

Allowing more roads to be built without the high cost, Roads can be built without making road cost higher than timber value.

- Less roadless areas
  - limits timber harvest
  - limits ability to fight fire

More selective harvest

- Allow windmills to be built to create Careers energy

Record of Comments:

Concerned about the possibility of 900+ acres of forest and wildlife habitat being destroyed if proposal for wind turbines is approved. Also, resulting erosion and its effect on the watershed and endangered (as well as other) wildlife. Shenandoah county forest is no less important than Rockingham Co.* The natural gas pipeline already traverses North Mtn. in the same area. Bald flies through this area regularly. There must be a better location with better wind.

* Rockingham Co has already discarded Wind Turbine

Your Name (Optional): [signature]

Record of Comments:

There are so many different groups and populations that use these public lands — wind farms on these lands will add yet another pressure, another use. Wind farms should be prohibited on these public lands! They will require acres and acres of new roads, and cleared ~~lands~~ areas in the most sensitive areas - the ridgetops. Wilderness areas should be preserved. Wind mills already receive 60% tax subsidies. There's no reason why we should provide a double subsidy by letting these industrial interests build on public lands. Keep wind mills out of these public lands.
