

Mill Dam Reconstruction Monitoring Trip  
9/25 – 9/26/07

I visited the site overnight. Work was in progress and going according to plan. Dave Jones, the engineer was at the site. The contractor said this year's work will be done in one week.

New berm below dam

Borrow pit below high water line

New weir

Dumping fill with power wheel barrel

Fuel Storage on west end of dam

Early warning device

I see no violations of the operating plan.

**Encounters:**

9/25 – 1 dam owner

9/26 – At the dam – 2 engineers, 4 contractors, on the trail – 3 separate hikers going to work on the dam, 2 dam packers with 7 head of stock. I saw nobody unrelated to the dam work on this trip.
