

**Not R2 SS, But Should Be Considered for other
Emphasis Species Lists**

Recommendations and Evaluations

Common Name: Brown Creeper

Scientific Name: *Certhia americana*

Recommendation: **Not R2 SS, be should be considered for other Emphasis Species Lists**

Recommendation Rationale:

This species is widely distributed (G5) but not abundant. It is dependent on large-diameter ponderosa pine, spruce and Douglas-fir snags with loose bark for foraging and nesting. It is also associated with interior forest conditions. Past logging in old growth forests, especially in ponderosa pine communities, has likely diminished availability of habitat. However, there is no strong evidence of population decline. Forests should consider this species for Other Emphasis lists.
