

Not R2 Sensitive Species and Not of Concern

Recommendations and Evaluations

Common Name: Black-and-white Warbler

Scientific Name: *Mniotilta varia*

Recommendation: Not R2 Sensitive Species and Not of Concern

Recommendation Rationale:

This is a widespread species that is rated as G5. This species occurs in eastern Region 2 which is along the western periphery of the species range. Rare and uncommon breeder in South Dakota, northern Nebraska, and eastern Kansas. Because R2 administered lands are on the western periphery of this species range and they provide limited suitable habitat, NFS lands do contribute significantly to this species welfare. This could be considered a species of local emphasis where local breeding populations on R2 administered lands occur.
