

Not R2 Sensitive Species and Not of Concern

Recommendations and Evaluations

Common Name: Black-billed Cuckoo

Scientific Name: *Coccyzus erythrophthalmus*

Recommendation: Not R2 Sensitive Species and Not of Concern

Recommendation Rationale:

R2 is on the southwestern edge of the species breeding range. Within R2, the species is an uncommon but widely distributed breeder in the northern and eastern parts of the region. R2 is on the extreme periphery of its range, the majority of the habitat (deciduous and coniferous forests) for this species is probably off National Forest System lands, and that which does occur is believed to be relatively secure.
