

## Not R2 Sensitive Species and Not of Concern

### Recommendations and Evaluations

**Common Name:** Green Heron

**Scientific Name:** *Butorides virescens*

**Recommendation:** Not R2 Sensitive Species and Not of Concern

#### Recommendation Rationale:

Population is considered to be stable, distribution spotty in R2 but more common in extreme eastern portion. We question the assertion that lowered wooded riparian zone habitat, are considered adequate and stable and resilient to modification. However, there is no compelling indication of population decline or significant threat to habitat due to NFS management actions.
