

## Not R2 Sensitive Species and Not of Concern

### Recommendations and Evaluations

**Common Name:** Sharp-shinned Hawk

**Scientific Name:** *Accipiter striatus*

**Recommendation:** Not R2 SS and not of concern

### Recommendation Rationale:

This species is widely distributed in North America, with breeding and wintering habitat in R2. PIF PT scores of 3 indicate species is not well sampled by BBS, but it appears to be widespread & relatively abundant in R2 forested areas. The species appears to be resilient and there is no information suggesting a viability concern.
