

Not R2 Sensitive Species and Not of Concern

Recommendations and Evaluations

Common Name: Wilson's Phalarope

Scientific Name: *Phalaropus tricolor*

Recommendation: Not R2 Sensitive Species and Not of Concern

Recommendation Rationale:

This species is widespread and relatively common within its range. Apparently stable population trend in Canada, and possible increase in western North America. There is no evidence of a decline in habitat trend, especially on NFS lands. These factors do not allow a compelling case to be made for SS designation at this time.
