

Not R2 Sensitive Species and Not of Concern

Recommendations and Evaluations

Common Name: Yellow Rail

Scientific Name: *Coturnicops noveboracensis*

Recommendation: Not R2 Sensitive Species and Not of Concern

Recommendation Rationale:

This species occurs only rarely in the states of R2 (R2 is on the SW periphery of the species range) and the species has not been documented as occurring on any NFS units in R2. Outside of R2 it is widely distributed. There is no abundance information available for R2 (casual visitor to R2 states) and no population trend data. Habitats appear to be stable with few threats on NFS units.
