

SAN JUAN PUBLIC LANDS

American Recovery & Reinvestment Act Projects Jobs

ARRA fund recipients are required to calculate and report online quarterly the number of jobs created through their contracts/agreements. The number of jobs created in each project area is based on the number of hours worked per year by a full-time employee working 40 hours per week for 52 weeks per year (or 2,080 hours). To reflect this, the number of full-time jobs created for each individual quarter must be calculated by dividing 2,080 by four.

The number of jobs created was reported in the county of record for the respective contractors, not the county where the work was performed. In many cases, contractors also had local offices and/or hired local subcontractors, other factors which are not reflected in the posted numbers. This means that the number of jobs by county does not necessarily reflect the full benefit realized by the county where work was performed.

Jobs created on the San Juan varied by quarter from a low of 2.61 to a high of 80.46. This variation is due to both administrative and seasonal factors. The contracting process, from the time a contract is submitted for solicitation until the time of award can be as long as 120 days. In FY2009 and the first half of FY2010, contracts were still being advertised and awarded, and so much of the work did not begin until the later portion of FY2010. Also, seasonal constraints in Q1 of FY 2010 (Oct - Dec) prevented the start of most construction projects.

The number of ARRA-funded jobs created by quarter is displayed in the table below. Rows highlighted in blue below show jobs created in the counties where the work was performed.

FederalReporting.gov

Information on jobs created through San Juan Public Lands (USFS only) ARRA projects entered to date on www.FederalReporting.gov by private contractors and partners:
