<b>Sensitive Species Recommendation</b> (Please check 1 box below)						
<input checked="" type="checkbox"/>	<b>R2 Sensitive Species (SS)</b>		<b>Not R2 SS, but should be considered for other Emphasis Species Lists</b>			
<input type="checkbox"/>	<b>Not R2 SS and Not of Concern Now</b>		<b>Insufficient Information Available to make a recommendation</b>			
<b>Recommendation Rationale</b>						
<p><b>This species is endemic to southwestern Colorado, where it is known from only three occurrences. One of the occurrences is partially on the San Juan National Forest. It is possible that additional occurrences will be found with additional inventory, but it is thought to be restricted to San Miguel and Dolores counties (NatureServe 3/1/07). According to O’Kane and Reveal (2006), all known occurrences are subject to over-grazing, intense recreational use, and soil disturbance. This species merits sensitive status due to rarity and threats to its populations and habitat.</b></p>
