Sensitive Species Recommendation (Please check 1 box below)						
<input checked="" type="checkbox"/>	R2 Sensitive Species (SS)		Not R2 SS, but should be considered for other Emphasis Species Lists			
<input type="checkbox"/>	Not R2 SS and Not of Concern Now		Insufficient Information Available to make a recommendation			
Recommendation Rationale						
<p>A boreal species known from Alaska to Newfoundland, south to B.C. and MN, and in the Rocky Mountains from MT to CO. In R2, known from the Bighorn NF in WY and 3-4 populations on the Arapaho-Roosevelt and Pike-San Isabel NFs in CO. Also known from the Yellowstone Plateau in WY. It is found in the understory of spruce and willow dominated communities, boggy woods, and mountain meadows at 7,000-9,000 ft. Population and habitat trend unknown, with one evaluator indicating it may be stable in the short term but declining over the long term due to climate change. Extant populations and riparian habitats may be impacted by recreation (one site adjacent to campground), highway maintenance, and other multiple use management. Sensitive status is warranted.</p>
