Sensitive Species Recommendation (Please check 1 box below)					
<input checked="" type="checkbox"/>	R2 Sensitive Species (SS)	Not R2 SS, but should be considered for other Emphasis Species Lists			
<input type="checkbox"/>	Not R2 SS and Not of Concern Now	Insufficient Information Available to make a recommendation			
Recommendation Rationale					
<p>This species is found only on the Black Hills within R2, disjunct from its range in the eastern U.S. Habitat trend for this species is down from historic conditions, and invasion of its habitat by both conifers and exotic plants are currently restricting or resulting in a downward trend of habitat. Collection for medicinal purposes is another potential risk for this species. It has been overharvested and populations decimated in other areas of the country. Where the species grows in the Black Hills, it forms dense clumps and unscrupulous harvest could wipe out occurrences there fairly easily.</p>
