	R2 Sensitive Species (SS)	<input checked="" type="checkbox"/> Not R2 SS, but should be considered for other Emphasis Species Lists			
	Not R2 SS and Not of Concern Now	<input type="checkbox"/> Insufficient Information Available to make a recommendation			
Recommendation Rationale					
<p>This species is endemic to CO (G2). Moderate survey effort has identified 12 populations in Boulder County and 3 populations in Larimer County, with one historical occurrence in WY. It typically is found on north-facing granite cliffs and rock outcrops, and occasionally on pine duff. The Phantom Canyon population appears to be stable based on five years of monitoring. Threats appear to be low and would be localized. There is no evidence of downward trends, but the species is a rare endemic, and should be considered by the AR and MBR for other Emphasis Species lists.</p>
