

**Not R2 SS, But Should Be Considered for other
Emphasis Species Lists**

Recommendations and Evaluations

Common Name: low northern-rockcress

Scientific Name: *Braya humilis*

Recommendation: **Not R2 SS, be should be considered for other Emphasis Species Lists**

Recommendation Rationale:

--Est. 20 occurrences in CO and one in WY, the latter in Fitzpatrick Wilderness on the Shoshone NF.

--CO and WY pops are mostly small and patchy and found on calcareous substrates above 11k ft.

--Habitat is relatively stable and threats are presumed low to most pops., except WY occurrence has est. 50 individuals and is located near a major trail in a wilderness.

--Does not appear to be a viability concern regionally but local pops may be at risk, esp. in WY.
