<b>Sensitive Species Recommendation</b>				<b>(Please check 1 box below)</b>		
<input type="checkbox"/>	<b>R2 Sensitive Species (SS)</b>	<input checked="" type="checkbox"/>	<b>Not R2 SS, but should be considered for other Emphasis Species Lists</b>			
<input type="checkbox"/>	<b>Not R2 SS and Not of Concern Now</b>		<b>Insufficient Information Available to make a recommendation</b>			
<b>Recommendation Rationale</b>						
<p>Two disjunct patches in Wyoming and Colorado where the species occurs; on NFS lands in Colorado and Wyoming. Populations stable in the 1990s. Threats are few due to rugged alpine habitat (sandy soils and gravels amid limestone boulders and talus on steep alpine slopes). The species occurs primarily in the northern Rockies of Montana and Canada.</p>
