<input type="checkbox"/> R2 Sensitive Species (SS)		<input checked="" type="checkbox"/> Not R2 SS, but should be considered for other Emphasis Species Lists			
<input type="checkbox"/> Not R2 SS and Not of Concern Now			<input type="checkbox"/> Insufficient Information Available to make a recommendation		
Recommendation Rationale					
<p>Outside of R2, considered to be a common plant along streams and rivulets in subalpine and alpine zone of western North America. Within R2, it is broadly distributed along the northern, central and southwestern mountains of CO, found only in the Absaroka Range in WY. An obligate wetland species, it almost always occurs in wetlands between 7,000 and 12,000 ft., in subalpine streams and alpine rills. Many of these habitats were impacted historically by diversions, grazing, etc. Appears to be resilient to seasonal changes in hydrology. Because of its overall broad distribution and abundance, and fairly broad distribution in CO, it should be considered for other Emphasis Species lists, particularly in WY.</p>
